NOTICE OF PREPARATION

LOS ANGELES, COUNTY CLERK

To:

Responsible Agencies, Trustee Agencies, Stakeholders and Interested Parties

From:

City of Los Angeles Department of Public Works

Bureau of Engineering, Environmental Management Group

1149 South Broadway, Suite 600 Los Angeles, CA 90015-2213

Subject:

Notice of Preparation of a Draft Environmental Impact Report for the

Echo Park Lake Rehabilitation Project

The City of Los Angeles (City) Department of Public Works, Bureau of Engineering (BOE) is the Lead Agency under the California Environmental Quality Act (CEQA) and will prepare an Environmental Impact Report (EIR) for the proposed project. The State of California has identified Echo Park Lake (Lake) as an impaired water body with the following types of water quality issues: algae, ammonia, eutrophic conditions, copper, lead, odor, polychlorinated byphenyls (PCBs), trash, and pH. As a result, the City is proposing to implement in-lake improvements; vegetation, habitat and park improvements; and parkland structural best management practices at the Lake. The proposed project would be consistent with the Regional Water Quality Control Board's intent to restore the existing and potential beneficial water quality uses in the Lake.

The City requests your agency's views on the scope and content of the environmental information relevant to your agency's statutory responsibilities in connection with the proposed project, in accordance with California Code of Regulations, Title 14, Section 15082(b). Your agency may need to use the EIR when considering any permit or other approval that your agency must issue for the proposed project. In addition, the City requests comments from other interested parties, stakeholders, and the general public on the scope of the environmental issues related to the proposed project.

The project site is located at 751 Echo Park Avenue within the Echo Park/Silver Lake community of the City of Los Angeles and is bound by Park Avenue on the north, Echo Park Avenue on the east, Bellevue Avenue on the south, and Glendale Boulevard on the west. The project site is also located within the Los Angeles River Watershed. US Highway 101 (US 101, Hollywood Freeway) travels in an east-west direction in this area of Los Angeles, and is located approximately 0.05 mile (250 feet) south of the project site. State Route 110 (SR 110, Pasadena Freeway) travels in a north-south direction and is located approximately 0.8 mile east of the project site. Figure 1 and Figure 2 attached show the regional location and the project location, respectively.

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, will provide reasonable accommodation to ensure equal access to its programs, services, and activities. Sign language interpreters, assistive listening devices, or other auxiliary aids and/or services may be provided upon request.

The project site includes a 24-acre portion of Echo Park Lake (Park), an open-space recreational facility. The Lake occupies 13 acres and is surrounded by 11 acres of open recreational space. A 2-acre portion of the Park is located on the south side of Bellevue Avenue and a 5-acre portion of the Park is located further south on the south side of US 101. These 7 acres are not part of the project site. In 2006, the City designated the Park as Historic-Cultural Monument (HCM) No. 836. Features contributing to this designation were the Spanish Colonial Revival-style architecture in the Park, English-style landscaping, and defining characteristics including the Lake itself, the footbridge, perimeter paths, boathouse, recreation building, lotus beds and the Park's unusual trees.

Figure 3 attached illustrates an overview of the proposed project site plan. The proposed project would include the following improvements at the Lake:

- Install a new Lake liner
- Construct wetland areas within the Lake to help achieve water quality objectives in the Lake
- Construct a new Lake outlet
- Construct a partition berm in the Lake to comply with California Division of Safety of Dams (DSOD) requirements
- Construct a recirculation pump and piping system to circulate the Lake water
- Modify existing storm drains inletting to the Lake to divert low flow urban runoff into the Lake.
- Place aquatic emergent plants at various points along the Lake edge
- Various improvements to the Lake's edge and areas adjacent to the Lake's edge
- Replace a majority of the existing asphalt pathway around the Lake perimeter with pervious materials
- Construct hydrodynamic separators in the existing storm drain systems to remove trash and debris
- Construct rain gardens and grassy swales around the Lake
- Upgrade the irrigation system to improve efficiency

An analysis of potential environmental effects is provided in the Initial Study Checklist prepared for the proposed project. Potential impacts associated with the proposed project may include:

- Aesthetics
- Air Quality
- Biological Resources
- Cultural Resources
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Noise
- Recreation
- Transportation/Traffic

The Initial Study Checklist is available for review at the following locations:

- Echo Park Branch Library, 1410 West Temple Street, Tel: (213) 250-7808
- Edendale Branch Library, 2011 West Sunset Boulevard, Tel: (213) 207-3000
- Office of Council President Eric Garcetti, Council District 13, Hollywood District Office, 5500 Hollywood Boulevard, Tel: (323) 957-4500
- Office of Council President Eric Garcetti, Council District 13, Glassell Park Office, 3750 Verdugo Road, Tel: (323) 478-1296

A copy of the Initial Study Checklist may also be obtained by contacting Ms. Maria Martin of the Bureau of Engineering at (213) 485-5753 and can also be accessed online at: http://eng.lacity.org/techdocs/emg/Environmental Review Documents.htm

A scoping meeting will be held to obtain input on the scope of the contents of the EIR, as well as to present information on the proposed project design. This meeting will be held at the following date, time and location:

#### Wednesday, September 23, 2009

6:30 p.m. Logan Street Elementary School - Auditorium 1711 Montana Street Los Angeles, CA 90026

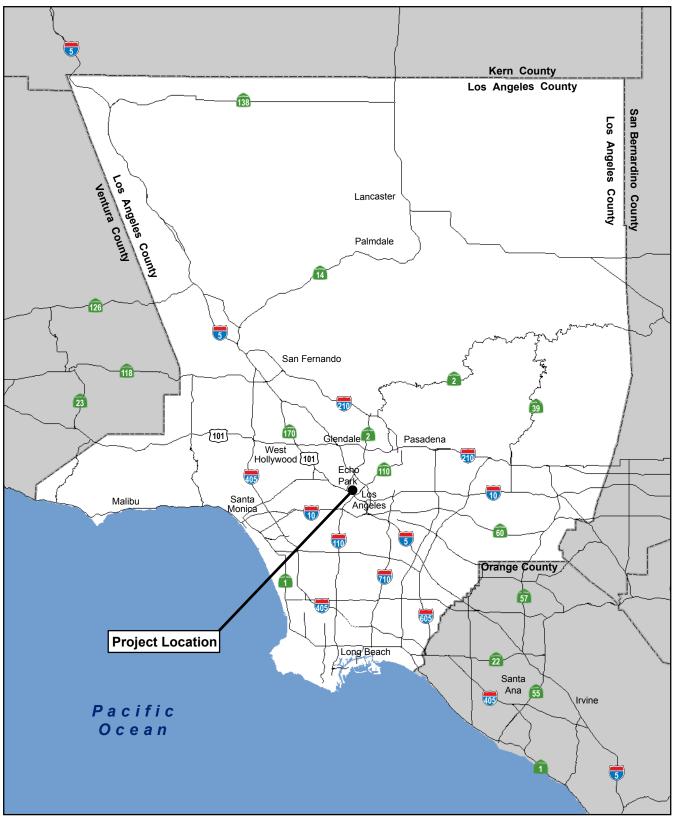

Si usted necesitará un traductor para esta reunión, comuníquese con Olga Morales al (213) 485-5933 antes de las 5:00 p.m. el 18 de septiembre.

Comments will be accepted from September 10, 2009 through October 9, 2009. Please send your comments by mail to:

Ms. Maria Martin, Environmental Supervisor City of Los Angeles Department of Public Works Bureau of Engineering, EMG 1149 S. Broadway, Suite 600, Mail Stop 939 Los Angeles, CA 90015-2213

Comments may also be submitted by e-mail to Maria.Martin@lacity.org (please include "Echo Park Comments" in the subject line) or by fax to (213) 847-0656.

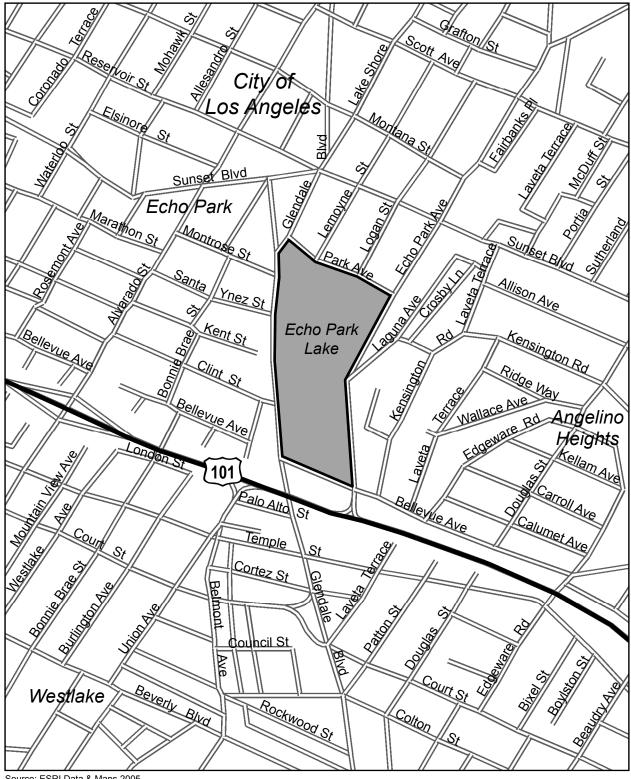

Si usted necesita más información en español acerca de este Aviso de Preparación, llame a Olga Morales al (213) 485-5933.

# CITY OF LOS ANGELES CALIFORNIA ENVIRONMENTAL QUALITY ACT INITIAL STUDY

Council District: 13 Date: September 10, 2009

Lead City Agency: Department of Public Works, Bureau of Engineering

Project Title: Echo Park Lake Rehabilitation Project

#### I. INTRODUCTION

#### A. Purpose of an Initial Study

The California Environmental Quality Act (CEQA) was enacted in 1970 for the purpose of providing decision-makers and the public with information regarding environmental effects of proposed projects; identifying means of avoiding environmental damage; and disclosing to the public the reasons behind a project's approval even if it leads to significant environmental impacts. The Bureau of Engineering Environmental Management Group (EMG) has determined that the proposed project is subject to CEQA and that no exemptions apply. Therefore, the preparation of an Initial Study is required.

An Initial Study is a preliminary analysis conducted by the lead agency, in consultation with other agencies (responsible or trustee agencies, as applicable), to determine whether there is substantial evidence that a project may have a significant effect on the environment. If the Initial Study concludes that the project, with mitigation, may have a significant effect on the environment, an Environmental Impact Report (EIR) should be prepared; otherwise the lead agency may adopt a Negative Declaration (ND) or Mitigated Negative Declaration (MND).

The Initial Study contained herein has been prepared in accordance with CEQA (Public Resources Code §21000 et seq.), the State CEQA Guidelines (Title 14, California Code of Regulations, §15000 et seq.), and the City of Los Angeles CEQA Guidelines (1981, amended July 31, 2002). The City of Los Angeles Department of Public Works, Bureau of Engineering is the lead agency under CEQA.

#### **B.** Document Format

This Initial Study is organized into seven sections as follows:

<u>Section I, Introduction:</u> provides an overview of the project and the CEQA environmental documentation process.

<u>Section II, Project Description</u>: provides a description of the project location, project background, and project components.

<u>Section III, Existing Environment</u>: provides a description of the existing environmental setting with focus on features of the environment which could potentially affect the proposed project or be affected by the proposed project.

<u>Section IV, Environmental Effects/Initial Study Checklist</u>: presents the City's Checklist for all impact areas and mandatory findings of significance.

#### INITIAL STUDY PUBLIC WORKS – BUREAU OF ENGINEERING

<u>Section V, Preparation and Consultation:</u> provides a list of key personnel involved in the preparation of this report and key personnel consulted.

<u>Section VI, Determination – Recommended Environmental Documentation:</u> provides the recommended environmental documentation for the proposed project; and,

Section VII, References: provides a list of reference materials used during the preparation of this report.

#### C. CEQA Process

To begin the CEQA process, the lead agency identifies a proposed project. The lead agency then prepares an Initial Study to identify the preliminary environmental impacts of the proposed project. If the Initial Study determines that a proposed project would have significant environmental impacts that would require further study and/or the implementation of mitigation measures, the lead agency may decide to prepare either an MND or EIR. If it is foreseen that no feasible mitigation measures may exist to reduce certain significant impacts identified in the Initial Study, the lead agency must prepare an EIR. A Notice of Preparation is prepared to notify public agencies and the general public that the lead agency is starting the preparation of an EIR for the proposed project. The Notice of Preparation and Initial Study are circulated for a 30-day review and comment period. During this review period, the lead agency requests comments from agencies, interested parties, stakeholders, and the general public on the scope of the environmental issues presented in the Initial Study and to be evaluated in the EIR.

After the close of the 30-day review and comment period, the lead agency continues the preparation of the Draft EIR and associated technical studies (if any). Once the Draft EIR is complete, a Notice of Availability is prepared to inform the public agencies and the general public of the document and the locations where the document can be reviewed. The Draft EIR and Notice of Availability are circulated for a 45-day review and comment period. The purpose of this review and comment period is to provide public agencies and the general public an opportunity to review the Draft EIR and comment on the adequacy of the analysis and the findings of the lead agency regarding potential environmental impacts of the proposed project. After the close of the 45-day review and comment period, responses to all comments received on the Draft EIR are prepared. The lead agency prepares a Final EIR, which incorporates the Draft EIR or a revision to the Draft EIR, Draft EIR comments and list of commentors, and response to comments discussion. In addition, the lead agency must prepare the findings of fact for each significant effect identified, a statement of overriding considerations if there are significant impacts that cannot be mitigated, and a mitigation monitoring and reporting program to ensure that all proposed mitigation measures are implemented.

The Board of Public Works considers the Final EIR, together with any comments received during the public review process, and makes a recommendation to the City Council on whether or not to certify the Final EIR and approve the project. One or more Council committees may then review the proposal and documents and make its own recommendation to the full City Council. The City Council is the decision-making body and also considers the Final EIR, together with any comments received during the review and comment process, in the final decision to certify the Final EIR and approve or disapprove the project. During the project approval process, persons and/or agencies may address either the Board of Public Works or the City Council regarding the project. Public notification of agenda items for the Board of Public Works, Council committees and City Council is posted 72 hours prior to the public meeting. The Council agenda can be obtained by visiting the Council and Public Services Division of the Office of the City Clerk at City Hall, 200 North Spring Street, Suite 395; by calling 213/978-1047, 213/978-1048 or 213/978-1055 (hearing impaired); or via the internet at http://www.lacity.org/CLK/index.htm.

If the project is approved, the City would file a Notice of Determination with the Los Angeles County Clerk within 5 days. The Notice of Determination would be posted by the Los Angeles County Clerk within 24 hours of receipt. This begins a 30-day statute of limitations on legal challenges to the approval under CEQA.

## INITIAL STUDY PUBLIC WORKS – BUREAU OF ENGINEERING

As a covered entity under Title II of the Americans with Disabilities Act, the City of Los Angeles does not discriminate on the basis of disability and, upon request, would provide reasonable accommodation to ensure equal access to its programs, services, and activities.

#### II. PROJECT DESCRIPTION

#### A. Location

The project site is located at 751 Echo Park Avenue within the Echo Park/Silver Lake community of the City of Los Angeles and is bound by Park Avenue on the north, Echo Park Avenue on the east, Bellevue Avenue on the south, and Glendale Boulevard on the west. The project site is also located within the Los Angeles River Watershed. US Highway 101 (US 101, Hollywood Freeway) travels in an east-west direction in this area of Los Angeles, and is located approximately 0.05 mile (250 feet) south of the project site. State Route 110 (SR 110, Pasadena Freeway) travels in a north-south direction and is located approximately 0.8 mile east of the project site. The project site includes a 24-acre portion of Echo Park Lake (Park), an open-space recreational facility. The Lake occupies 13 acres and is surrounded by 11 acres of open recreational space. A 2-acre portion of the Park is located on the south side of Bellevue Avenue and a 5-acre portion of the Park is located further south on the south side of US 101. These 7 acres are not part of the project site. Figure 1 and Figure 2 show the regional location and the project site location, respectively.

#### B. Background

The City of Los Angeles is implementing a Clean Water Bond Program approved by voters in November 2004 as Proposition O (Prop O). Prop O authorized the City to issue a series of general obligation bonds for up to \$500 million for projects to protect public health by cleaning up pollution in the City's watercourses, beaches, and ocean. The measure also funds improvements to protect water quality, provide flood protection, and increase water conservation, habitat protection, and open space.

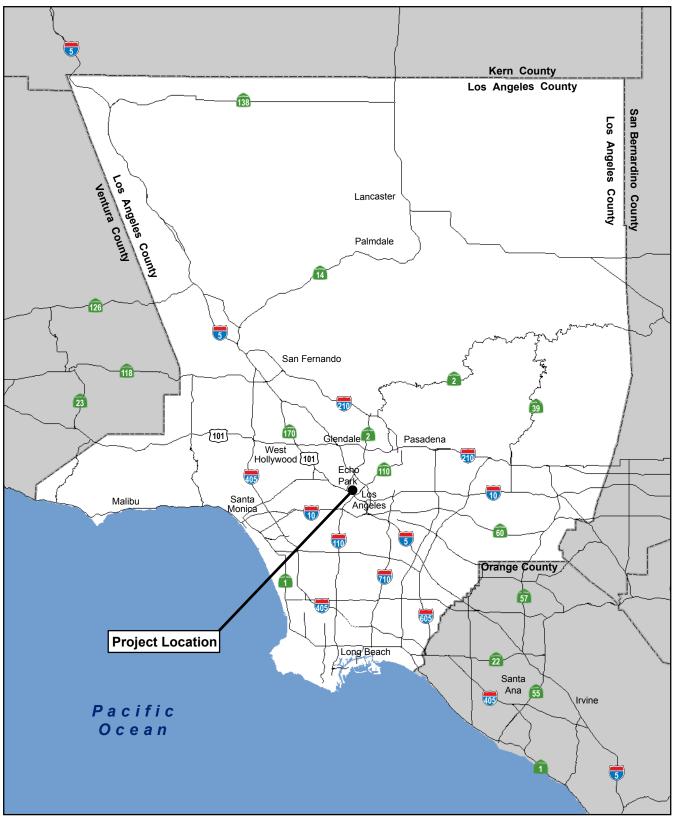

A component of the Prop O Program is the Echo Park Lake Rehabilitation Project (proposed project). A Pre-Design Report was prepared to identify and describe the proposed project, describe the extensive investigations undertaken at the project site, discuss preliminary budget and schedule information, and present recommendations for proposed project implementation. The project description and analysis presented in this Initial Study is based on the information presented in the Pre-Design Report.

In 2006, the City designated the Park as Historic-Cultural Monument (HCM) No. 836. Features contributing to this designation were the Spanish Colonial Revival-style architecture in the Park, English-style landscaping, and defining characteristics including the Lake itself, the footbridge, perimeter paths, boathouse, recreation building, lotus beds, and the Park's unusual trees.

#### C. Project Objectives

The main objectives of the proposed project are to:

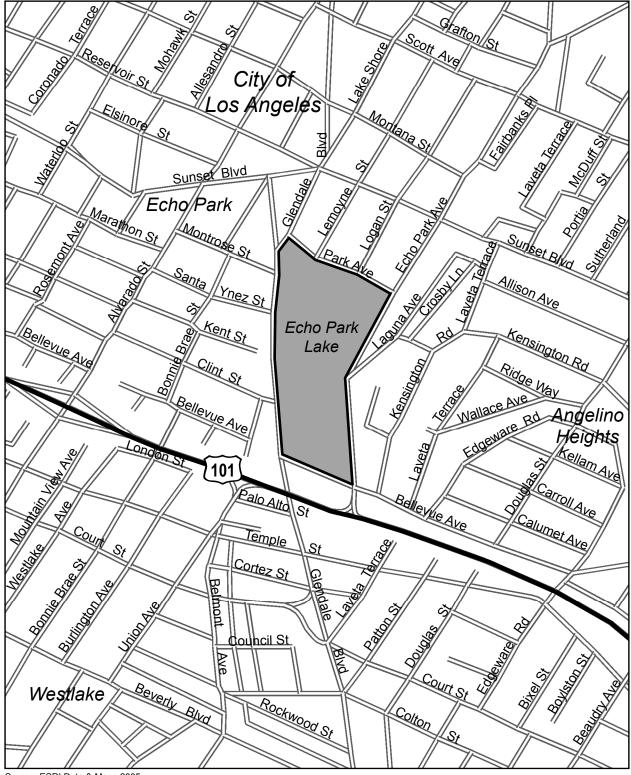

- Improve the water quality in the Lake and contribute to water quality improvement in the Los Angeles River Watershed.
- Reduce the use of municipal water required to maintain the water level of the Lake.
- Comply with the Regional Water Quality Control Board's intent to restore the existing and potential beneficial water quality uses in the Lake. The existing beneficial uses include non-contact water recreation (REC-2) and wildlife habitat (WILD). The potential beneficial uses include municipal and domestic water supply (MUN), warm freshwater habitat (WARM), and wetland habitat (WET).
- Assist the City in meeting the current and future total maximum daily load (TMDL) requirements.
- Implement multi-purpose solutions at the Lake, consistent with the Prop O objectives of water supply, water quality, flood reduction, storm water use, and recreation.

**Project Site** 

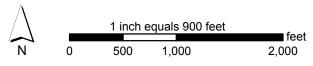

Figure 2 Project Location

#### D. Project Description

#### **Project Overview and Background**

Echo Park Lake (Park) has been a part of the City's history for more than 150 years. Historical records indicate that Echo Park Lake (Lake) was originally built as a water supply reservoir in the 1860s. Over time, the use of the Lake was transformed to that of a detention basin in the storm drainage system, providing hydraulic relief during storm events. The State of California has identified the Lake as an impaired water body with the following types of water quality issues: algae, ammonia, eutrophic conditions, copper, lead, odor, polychlorinated byphenyls (PCBs), trash, and pH. As a result, the City is proposing to implement in-lake improvements; vegetation, habitat and park improvements; and parkland structural best management practices at the Lake. The proposed project would be consistent with the Regional Water Quality Control Board's intent to restore the existing and potential beneficial water quality uses in the Lake.

#### **Project Elements**

An overview of the proposed project is shown in Figure 3. The proposed project includes the following key components:

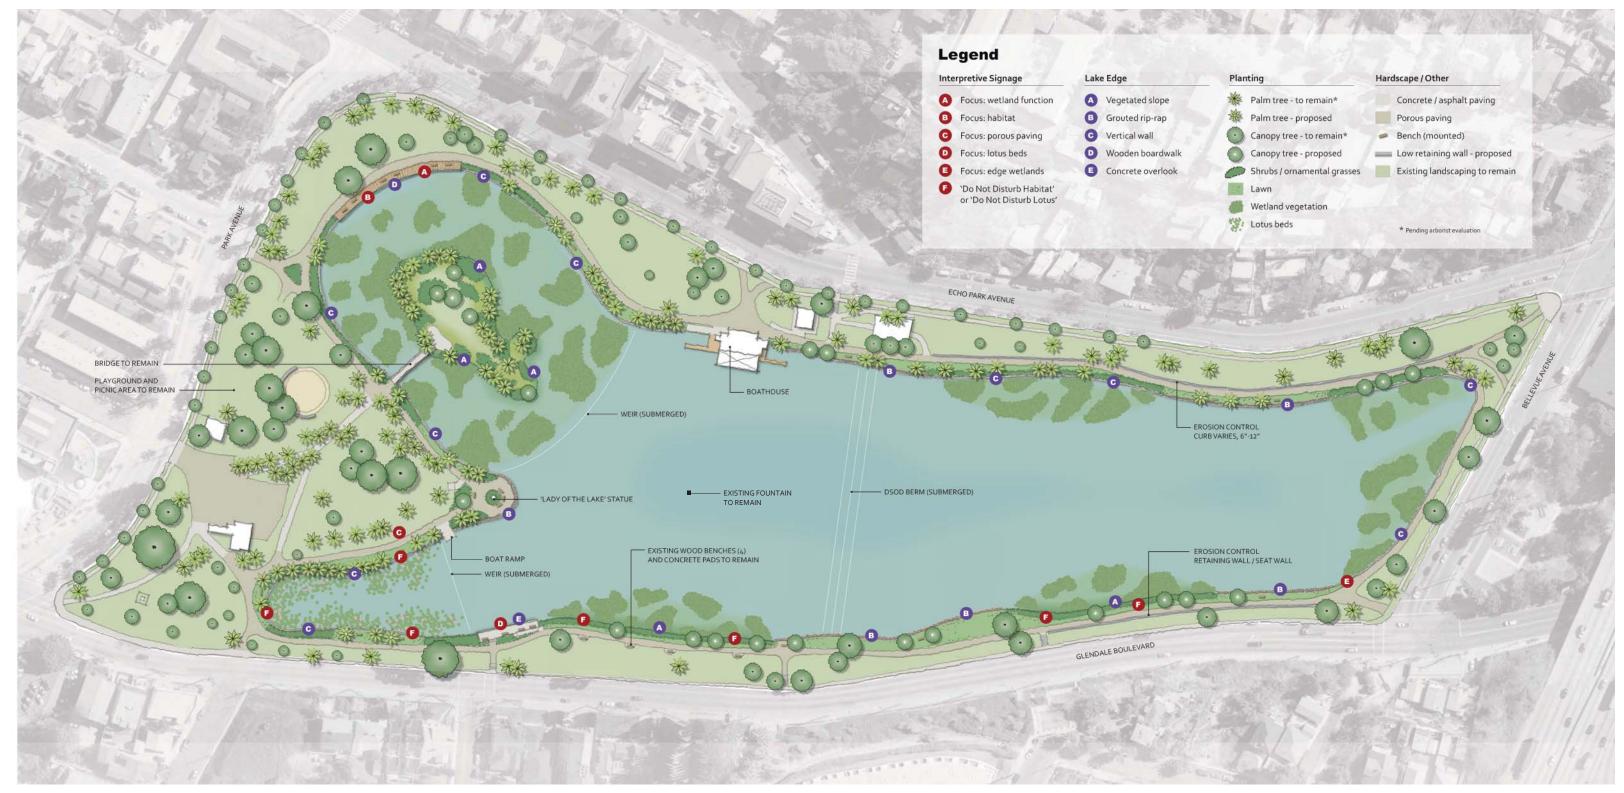

- Install a new Lake liner
- Construct wetland areas within the Lake to help achieve water quality objectives in the Lake
- Construct a new Lake outlet
- Construct a partition berm in the Lake to comply with California Division of Safety of Dams (DSOD) requirements
- Construct a recirculation pump and piping system to circulate the Lake water
- Modify existing storm drains inletting to the Lake to divert low flow urban runoff into the Lake
- Place aquatic emergent plants at various points along the Lake edge
- Various improvements to the Lake's edge and areas adjacent to the Lake's edge
- Replace a majority of the existing asphalt pathway around the Lake perimeter with pervious materials
- Construct hydrodynamic separators in the existing storm drain systems to remove trash and debris
- Construct rain gardens and grassy swales around the Lake
- Upgrade the irrigation system to improve efficiency

#### **Preliminary Construction Schedule and Scenario**

The estimated duration of the construction of the proposed project is January 2011 through February 2013. It is anticipated that the Park would be closed to the public during the construction phase due to the construction activities.

The activities would include draining the Lake to remove the sediment accumulated within the Lake. The removed sediment would require drying, handling and hauling from the project site. The Lake bed would be lined, requiring an area for stockpiling materials. It is anticipated that the majority of staging and storage for the Lake bed improvements would occur within the Lake bed itself. It is anticipated that the Lake bed improvements would occur concurrently along with the improvements to the adjacent Park. This would ultimately depend on the amount of available staging space within or near the Park.

Construction staging and laydown areas may be located adjacent to the north end of the Lake, which is a relatively flat area that currently includes City of Los Angeles Department of Recreation and Parks maintenance yard and is accessible to Park Avenue. Another potential staging and laydown area exists within the maintenance yard parking lot of the Park in addition to potential off-site locations to be determined prior to construction. Temporary site offices during the construction phase may be located on-site.

Source: EDAW AECOM August 2009

### INITIAL STUDY PUBLIC WORKS – BUREAU OF ENGINEERING

#### **Operation and Maintenance**

The Department of Recreation and Parks (RAP) operates and maintains the Park. However, it is currently anticipated that the proposed project would be jointly maintained by RAP and the Department of Public Works Bureau of Sanitation (BOS).

#### **Project Actions and Approvals**

The proposed project and environmental documentation, including this Initial Study, would require approval by the following City of Los Angeles decision-making bodies: Board of Public Works and the City Council. Additional anticipated approvals or permits for the proposed project include, but are not limited to the following:

- United States Army Corps of Engineers (USACE) Preliminary Jurisdictional (JD) Form and Nationwide Permit
- Los Angeles Regional Water Quality Control Board (RWQCB) permits including Section 401 Water Quality Certification Permit and Waste Discharge Requirement
- California Department of Fish and Game (CDFG) permits including CDFG Code Section 1600 Lake or Streambed Alteration Permit
- California Division of Safety of Dams (DSOD) approvals
- City of Los Angeles Department of Recreation and Parks, project and design review
- City of Los Angeles permits for disposal of materials and haul routes
- City of Los Angeles Cultural Affairs Commission approval

The analysis in this document assumes that, unless otherwise stated, the project would be designed, constructed and operated following all applicable laws, regulations, ordinances and formally adopted City standards (e.g., Los Angeles Municipal Code and Bureau of Engineering Standard Plans). Construction will follow the uniform practices established by the Southern California Chapter of the American Public Works Association (e.g., Standard Specifications for Public Works Construction and the Work Area Traffic Control Handbook) as specifically adapted by the City of Los Angeles (e.g., The City of Los Angeles Department of Public Works Additions and Amendments to the Standard Specifications For Public Works Construction [also known as "The Brown Book," formerly Standard Plan S-610]).

#### III. EXISTING ENVIRONMENT

The project site includes a 24-acre portion of Echo Park Lake (Park), an open-space recreational facility 0.8 mile northwest of Downtown Los Angeles. The Lake occupies 13 acres and is surrounded by 11 acres of open recreational space. A 2-acre portion of the Park is located on the south side of Bellevue Avenue and a 5-acre portion of the Park is located further south on the south side of US 101. These 7 acres are not part of the project site. Key features and activities in the Park include a footbridge, boathouse, the lotus bed, man-made island, paddle boating, catch-and-release fishing, a fountain, model boating, jogging, and strolls around the perimeter pathways. The Park contains numerous palm trees, other trees, shrubs and open grassy areas. The Park is operated and maintained by the City of Los Angeles Department of Recreation and Parks (RAP).

The project site is located within the Silver Lake-Echo Park-Elysian Valley Community Plan Area in the central area of the City of Los Angeles. The City of Los Angeles General Plan designates the project site as an open space land use.<sup>1</sup> The project site is zoned Open Space (OS-1XL), which allows for the development of parks, recreational facilities, natural resource preserves for the managed production of resources, marine and ecological preserves, public water supply reservoirs, water conservation areas and sanitary landfill sites that have received certificates of closure in compliance with federal and state regulations.<sup>2</sup> The project site is located within Height District No. 1, which is designated as being a Very Limited (VL) Height District. Height District 1-VL allows for the development of structures that are three stories or 45 feet in height.

The project site is located within the recently adopted Echo Park Community Design Overlay District. The district is bounded by Sunset Boulevard on the north, Bonnie Brae Street on the west, Echo Park Avenue on the east, and US 101 on the south. The purpose of this district is to preserve the original development pattern, neighborhood character and architectural resources in the Echo Park community.

The project site is surrounded by commercial, public facility and multi-family residential uses. Sunset Boulevard is located approximately 0.1 mile north of the project site. Additional recreational facilities associated with the Park, including a playground, swimming pool, and childcare center, are located south of the project site, on the south side of Bellevue Avenue. The US 101 is located directly south of these recreational uses. One- to four-story multi-family residential buildings are located west of the project site, on the west side of Glendale Boulevard. One- to two-story multi-family residential buildings and a large two- to five-story church are located north of the project site, on the north side of Park Avenue. The church includes Angelus Temple, which is a designated National Historic Landmark (No. 92001875).<sup>3</sup> One- to four-story multi-family residential buildings and a large two- to four-story church are located east of the project site, on the east side of Echo Park Avenue.

Glendale Boulevard, which is aligned north-south adjacent to the west side of the project site, is designated by the City as a Major Highway-Class II.<sup>4</sup>

As previously mentioned, the project site is located within the Los Angeles River Watershed. This watershed is approximately 834 square miles in area and extends from the eastern portions of Santa Monica Mountains, and Simi Hills, and Santa Susana Mountains to the San Gabriel Mountains in the west. The Los Angeles River Watershed encompasses and is shaped by the path of the Los Angeles River, which flows from its headwaters in the mountains eastward to the northern corner of Griffith Park where

#### INITIAL STUDY PUBLIC WORKS – BUREAU OF ENGINEERING

the channel turns southward through the Glendale Narrows before it flows across the coastal plain toward Long Beach.<sup>5</sup>

According to the Federal Emergency Management Agency (FEMA), the Lake is designated as a Special Flood Hazard Area which is subject to inundation by a 100-year flood (one percent annual chance flood). The 100-year flood is a flood that has a one percent chance of being equaled or exceeded in any given year. The Park and other areas surrounding the Lake are not designated as being within this flood zone.<sup>6</sup>

#### IV. ENVIRONMENTAL EFFECTS/INITIAL STUDY CHECKLIST

This section documents the screening process used to identify and focus upon environmental impacts that could result from the proposed project. The Initial Study Checklist below follows closely the form prepared by the Governor's Office of Planning and Research and was used in conjunction with the City's *CEQA Thresholds Guide* and other sources to screen and focus upon potential environmental impacts resulting from this project. In addition, the amendments proposed in April 2009 to the CEQA Guidelines, as they apply to the Initial Study Checklist, have been inserted into this document. Impacts are separated into the following categories:

- <u>No Impact.</u> This category applies when a project would not create an impact in the specific environmental issue area. A "No Impact" finding does not require an explanation when the finding is adequately supported by the cited information sources (e.g., exposure to a tsunami is clearly not a risk for projects not near the coast). A finding of "No Impact" is explained where the finding is based on project-specific factors, as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- <u>Less Than Significant Impact.</u> This category is identified when the project would result in impacts below the threshold of significance, and would therefore be less than significant impacts.
- <u>Potentially Significant Unless Mitigation Incorporated.</u> This category is identified when the project would have a substantial adverse impact on the environment but could be reduced to a less than significant level with incorporation of mitigation measure(s).
- <u>Potentially Significant Impact.</u> This category is applicable if there is substantial evidence that a
  significant adverse effect might occur, and no feasible mitigation measures are foreseen to reduce
  impacts to a less than significant level. If there are one or more "Potentially Significant Impact"
  entries when the determination is made, an EIR is required.

Sources of information that adequately support these findings are referenced following each question. All sources so referenced are available for review at the offices of the Bureau of Engineering, 1149 South Broadway, Suite 600, Los Angeles, California 90015. Please call Maria Martin at (213) 485-5753 for an appointment.

3. AIR QUALITY – Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	$\bowtie$			
Reference: L.A. CEQA Thresholds Guide (Sections B1 and B2); City of Lo Plan Air Quality Element, Silver Lake-Echo Park-Elysian Valley Communit Management Plan	y Plan; a	and <i>Air</i> G		
Comment: The project site is located within the South Coast Air Basin whi jurisdiction of the South Coast Air Quality Management District (SCAQN)			MD is	

Issues	Potentially Significant Impact	Potentially Signif. Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
the air pollution control district responsible for the Air Quality Management which is a comprehensive air pollution control program for attaining state air quality standards. As part of its General Plan, the City adopted an A contains policies and goals for attaining state and federal air quality state simultaneously facilitating local economic growth and includes impleme local programs contained in the AQMP. A significant impact would occur not consistent with the AQMP or the City's General Plan.	e and fe ir Quality ndards, v ntation s	deral am y Eleme while trategies	nbient nt that s for	
The Silver Lake-Echo Park-Elysian Valley Community Plan recognizes availability of adequate public facilities. The proposed project would se intended land uses and would not include regional employment or popuration objectives of the proposed project are to meet regulatory requirem water quality. Existing uses on and surrounding the project site would reproduce the proposed project may potentially result in a violation of air during the construction phase due to the number of construction truck to item 3(b) below. Therefore, the proposed project may result in potential related to conflicts with air quality plans. This issue will require further a	rve existilation grands and the character of the character of quality strips, as dilly signifi	ing and owth. The improvement of	he e ds d in	
<ul> <li>b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?</li> <li>Reference: L.A. CEQA Thresholds Guide (Sections B1 and B2) and SCAQMD Thresholds</li> <li>Comment: A significant impact may occur if the proposed project violated a quality standard. The SCAQMD has set thresholds of significance for r (ROG), nitrogen oxides (NOx), carbon monoxide (CO), sulfur dioxide (Smatter (PM10) emissions resulting from construction and operation in the Basin.</li> </ul>	eactive $60_2$ ), and	organic ( particul	gases ate	
The construction of the proposed project would involve the removal of s materials from the Lake bed. It is anticipated that approximately 50,000 sediment would be exported from the project site. As a result, a large r truck trips would be required to properly remove the sediment from the an increase in diesel emissions. The daily construction emissions of the may potentially exceed SCAQMD significance thresholds. The propose alter the operations of the Park and would not result in an increase in troperational phase. As such, no change in emissions is anticipated as a and maintenance.	O cubic y number o project s e propos ed projec affic trips	ards of of heavy- site, resu sed proje of would of during	-duty Ilting in ect not the	
Contractors would be required to follow all applicable SCAQMD rules are including AQMD Rule 403 (Fugitive Dust) and 431 (Diesel Equipment), impacts. Contractors, for example, would water dusty areas and minimize from unpaved dirt areas to paved roads.	to minim	ize air q		
Due to the large number of heavy-duty truck trips anticipated to be requ construction phase of the proposed project, impacts related to the poter quality standard may be potentially significant. This issue will require fu	ntial viola	ition of a	ın air	
<ul> <li>c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable federal or state ambient air quality standard (including releasing</li> </ul>				

Issues	Potentially Significant Impact	Potentially Signif. Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
emissions that exceed quantitative thresholds for ozone precursors)?  Reference: L.A. CEQA Thresholds Guide (Sections B1 and B2), 2006  Maps from http://www.arb.ca.gov/desig/adm/adm.htm#state	State Ar	ea Desi	gnation	

Comment: A significant impact would occur if the proposed project resulted in a cumulatively considerable net increase of a criteria pollutant for which the South Coast Air Basin exceeds federal and state ambient air quality standards and has been designated as an area of non-attainment by the U.S. Environmental Protection Agency (USEPA) and/or California Air Resources Board. The South Coast Air Basin is a non-attainment area for ozone, fine particulate matter (PM10), and carbon monoxide (federal only).

As indicated in item 3(b) above, construction emissions of the proposed project may

	potentially exceed the SCAQMD's thresholds of significance for criteria pollutants. Although the construction of the proposed project would be considered temporary in duration (approximately 25 months), the proposed project may result in potentially significant impacts related to a net increase of criteria pollutants. This issue will require further analysis.	
d)	Expose sensitive receptors to substantial pollutant concentrations?	
	Reference: <i>L.A. CEQA Thresholds Guide</i> (Sections B1, B2, and B3)  Comment: A significant impact would occur if construction or operation of the proposed project generated pollutant concentrations to a degree that would significantly affect sensitive receptors.	
	As discussed above, the proposed project may potentially result in substantial pollutant concentrations during the construction phase. The project site is surrounded by sensitive receptors including multi-family residential uses and churches, which would include children and elderly persons who may be particularly susceptible to the effects of a temporary increase in air quality pollutant concentrations. The heavy-duty construction trucks required to haul dirt during the construction of the proposed project are major emitters of the toxic air contaminant Diesel Particulate Matter (DPM). An analysis will be prepared to determine the potential significance of DPM exposure. Therefore, the proposed project may result in potentially significant impacts related to the exposure of sensitive receptors to substantial pollutant concentrations. This issue will require further analysis.	
e)	Create objectionable odors affecting a substantial number of people?	
	Reference: L.A. CEQA Thresholds Guide (Sections B1 and B2) Comment: A significant impact would occur if the project created objectionable odors during construction or operation that would affect a substantial number of people.	
	During construction, sources of odor are diesel emissions from construction equipment and volatile organic compounds from sealant applications or paving activities. However, these odors would be temporary and localized. Nonetheless, applicable best management practices such as those in SCAQMD Rule 431 (Diesel Equipment) would, in addition to minimizing air quality impacts, also help minimize potential construction odors.	

The construction of the proposed project would also involve the removal of sediment and other materials from the Lake bed. Once these materials are removed, they would be

FUBLIC WORKS - BUREAU OF ENGINEERING				
Issues	Potentially Significant Impact	Potentially Signif. Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
required to be piled in the staging areas established on the project s period of approximately one to two months. During the drying activit be emitted from the sediment piles due to decomposition of organic impacting the sensitive receptors in the project area.  The Lake has an aeration and circulation system that would assist in potential for excessive amounts of organic material in the sediment. anticipated to be created by the proposed project during the operation proposed project may result in potentially significant impacts related objectionable odors during the construction phase. Issues	Potentially Significant Impact	Potentially Signif. Unless Mitigation Incorporated	Less Than Significant Impact	No Impact
excavation, treatment, and/or disposal of contaminated groundwater would be conducted to the satisfaction of the applicable regulatory agencies, which could include the California Department of Toxic Substances Control (DTSC) and RWQCB. Investigations are currently on-going to determine if contaminated groundwater exists beneath the project site.				
In addition, three open leaking underground storage tank (LUST) clean-up sites are located within 0.25 mile of the project site and potentially up-gradient from the project site. These sites include Hollyway Cleaners at 1157 Echo Park Avenue, 76 Station #0779 at 1340 Glendale Boulevard, and Sunset Carwash at 2028 Sunset Boulevard. These sites are currently undergoing site assessment under the oversight of the Regional Water Quality Control Board for potential groundwater contamination. This issue will be further addressed in the EIR.				
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment? Reference: L.A. CEQA Thresholds Guide (Sections F.1 & F.2), Envirostor, of Toxic Substance Control; and Geotracker, State Water Resources C Comment: See comment 7 (a) above.			rtment	
<ul> <li>c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?</li> <li>Reference: L.A. CEQA Thresholds Guide (Sections F.2), Envirostor, California Department of Toxic Substance Control; and Geotracker, State Water Resources Control Board</li> <li>Comment: A significant impact may occur if the proposed project were locamile of an existing or proposed school site and were projected to releas which pose a hazard beyond regulatory thresholds.</li> </ul>				
Logan Street Elementary School is located approximately 0.2 mile north of the project site at 1711 Montana Street. The proposed Central Region Elementary School #14 is scheduled to open in 2011 at 1018 Mohawk Street, approximately 0.2 mile west of the project site. No other existing or proposed schools are located within 0.25 mile of the project site. As discussed in 7 (a) above, a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials is not anticipated as a result of the proposed project. Therefore, the proposed project would result in less than significant impacts related to the emission of hazardous emissions or the handling of hazardous materials within 0.25 mile of an existing or proposed school. No further analysis of this issue is required.				
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment? Issues	Potentially Significant Impact	Potentially Signif. Unless Mitigation Incorporated	Less Than Significant Impact	No Impact	
iv) Parks?					
Reference: L.A. CEQA Thresholds Guide (Section K.4) Comment: A significant impact may occur if the recreation and park could not accommodate the population increase resulting from the proposed project.					
The operation of the proposed project would not induce populatio construction of new housing, either directly or indirectly, and there increase the demand for parks in the project area.					
During the construction phase of the proposed project, the portion of the Park would be closed to the public. A temporary increase in park demand in the project area may result (and will be addressed under Section 15 Recreation below). However, the proposed project would not induce population growth in the project area, which would result in increased park facilities demands. Therefore, the proposed project would result in less than significant impacts related to parks. No further analysis of this issue is required.					
v) Other public facilities?					
Reference: Comment: Operation of the proposed project would not induce growth, either directly or indirectly, and is therefore not anticipated to increase the demand or use for other public facilities in the project area. As discussed above, the Park would be closed to the public. During construction, a temporary increase in park demand in the project area may result (and will be addressed under Section 15 Recreation below).  Therefore, the proposed project would result in less than significant impacts related to other public facilities. No further analysis of this issue is required.					
15. RECREATION —     a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated? Reference: L.A. CEQA Thresholds Guide (Section K.4)     Comment: A significant impact may occur if the proposed project included employment or population growth that generated demand for public part the capacity of existing parks.			xceed		
The operation of the Park and Lake would not be altered from existing conditions with the implementation of the proposed project. The proposed project would not directly or indirectly induce population growth. Therefore, the operation of the proposed project would not result in an increase in the demand for parks or other recreational facilities in the project area. However, a portion of the Park would be closed to the public during the construction phase potentially resulting in a temporary increase in the demand on other parks in the project area. Therefore, the proposed project may result in potentially significant impacts related to parks and recreational facilities. Further analysis of this issue is required.					
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment?					

Issues	Potentially Significant Impact	Potentially Signif. Unless Mitigation Incorporated	Less Than Significant Impact	No Impact	
Reference: L.A. CEQA Thresholds Guide (Section K.4) Comment: See comment 15 (a) above.		-	-		
<ul> <li>16. TRANSPORTATION/TRAFFIC – Would the project:         <ul> <li>a) Exceed the capacity of the existing circulation system, based on an applicable measure of effectiveness (as designated in a general plan policy, ordinance, etc.), taking into account all relevant components of the circulation system, including but not limited to intersections, streets, highways and freeways, pedestrian and bicycle paths, and mass transit? Reference:</li></ul></li></ul>					
that would be substantial in relation to the existing traffic load and capa- system taking into account all relevant components of the circulation sy		e street			
The proposed project consists of improvements to an existing recreation. The operations of the Park, including access, hours of operation, and nexpected, would not be altered with the implementation of the proposed vehicle traffic trips would not increase with the proposed project.	umber of	f patrons	3		
Approximately, 50,000 cubic yards of soil would be removed from the project site and exported during the construction phase. Assuming trucks with 20 cubic yard capacity are used, approximately 2,500 truck trips would be generated by the need to haul the exported soil to the proper facilities. Therefore, the proposed project may result in potentially significant impacts related to a temporary increase in traffic trips during the construction phase. A traffic impact analysis will be prepared for the construction phase of the proposed project to identify feasible mitigation measures, as well as any effects on intersections, streets, highways, and other components of the circulation system.					
b) Conflict with an applicable congestion management program, including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways?					
Reference: Comment: See comment15 (a) above. The proposed project may temporarily conflict with the Los Angeles County Congestion Management Program (CMP) during the construction phase, due to the large number of truck traffic trips and proximity of CMP intersections. Therefore, potentially significant impacts are anticipated and further analysis of this issue is required.					
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks? Reference:					
Comment: The proposed project involves the implementation of improvements to a recreational and park facility and would not involve any changes in air traffic patterns. Therefore, the proposed project would result in no impacts related to air traffic patterns. No further analysis of this issue is required.					
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?					

Issues	Potentially Significant Impact	Potentially Signif. Unless Mitigation Incorporated	Less Than Significant Impact	No Impact

Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?  Reference: L.A. CEQA Thresholds Guide (Section M.3); California Integrated Waste Management Board  Comment: A significant impact may occur if the proposed project were to increase solid waste generation to a degree that existing and projected landfill capacities would be insufficient to accommodate the additional waste.								
Excavated materials and debris would be disposed of at local landfills. The Chiquita Canyon Sanitary Landfill has a remaining capacity of 35,800,000 cubic yards (as of 2003) and is scheduled to cease operations in November of 2019. The Puente Hills Landfill has a remaining capacity of 49,348,500 cubic yards (as of 2006) and is scheduled to cease operations in October of 2013. The soil on the project site is not known to be contaminated and some would be suitable for backfill. Unsuitable soil and soil that could not be used at other construction sites would be disposed at these landfills, where some of the soil may be suitable for use as needed daily cover.								
During operation, trash and debris collected from the Park would be nominal in volume and similar to existing conditions. In addition, it is expected that a nominal amount of trash would be removed from the hydrodynamic separators during operation. Existing landfills have sufficient capacity to accommodate this small amount of solid waste from the proposed project. Therefore, the proposed project would result in less than significant impacts related to solid waste disposal. No further analysis of this issue is required.								
<ul> <li>g) Comply with federal, state, and local statutes and regulations related to solid waste?</li> <li>Reference: L.A. CEQA Thresholds Guide (Section M.3)</li> <li>Comment: A significant impact may occur if the proposed project would get that was in excess of or was not disposed of in accordance with application.</li> </ul>			ste					
Solid waste disposal during construction and operation would comply wastatutes and regulations related to solid waste. Therefore, less than significant and no further analysis of this issue is required.

#### VI. DETERMINATION - RECOMMENDED ENVIRONMENTAL DOCUMENTATION

The City of Los Angeles is implementing a Clean Water Bond Program approved by voters in November 2004 as Proposition O (Prop O). Prop O authorized the City to issue a series of general obligation bonds for up to \$500 million for projects to protect public health by cleaning up pollution in the City's watercourses, beaches, and ocean. The measure also funds improvements to protect water quality, provide flood protection, and increase water conservation, habitat protection, and open space.

A component of the Prop O Program is the Echo Park Lake Rehabilitation Project (proposed project). A Pre-Design Report was prepared to identify and describe the proposed project, describe the extensive investigations undertaken at the project site, discuss preliminary budget and schedule information, and present recommendations for proposed project implementation. The project description and analysis presented in this Initial Study is based on the information presented in the Pre-Design Report.

In 2006, the City designated the Park as Historic-Cultural Monument (HCM) No. 836. Features contributing to this designation were the Spanish Colonial Revival-style architecture in the Park, English-style landscaping, and defining characteristics including the Lake itself, the footbridge, perimeter paths, boathouse, recreation building, lotus beds, and the Park's unusual trees.

The main objectives of the proposed project are to:

- Improve the water quality in the Lake and contribute to water quality improvement in the Los Angeles River Watershed.
- Reduce the use of municipal water required to maintain the water level of the Lake.
- Comply with the Regional Water Quality Control Board's intent to restore the existing and potential beneficial water quality uses in the Lake. The existing beneficial uses include non-contact water recreation (REC-2) and wildlife habitat (WILD). The potential beneficial uses include municipal and domestic water supply (MUN), warm freshwater habitat (WARM), and wetland habitat (WET).
- Assist the City in meeting the current and future total maximum daily load (TMDL) requirements.
- Implement multi-purpose solutions at the Lake, consistent with the Prop O objectives of water supply, water quality, flood reduction, storm water use, and recreation.

Echo Park Lake (Park) has been a part of the City's history for more than 150 years. Historical records indicate that Echo Park Lake (Lake) was originally built as a water supply reservoir in the 1860s. Over time, the use of the Lake was transformed to that of a detention basin in the storm drainage system, providing hydraulic relief during storm events. The State of California has identified the Lake as an impaired water body with the following types of water quality issues: algae, ammonia, eutrophic conditions, copper, lead, odor, polychlorinated byphenyls (PCBs), trash, and pH. As a result, the City is proposing to implement in-lake improvements; vegetation, habitat and park improvements; and parkland structural best management practices at the Lake. The proposed project would be consistent with the Regional Water Quality Control Board's intent to restore the existing and potential beneficial water quality uses in the Lake.

The proposed project includes the following key components:

- Install a new Lake liner
- Construct wetland areas within the Lake to help achieve water quality objectives in the Lake
- Construct a new Lake outlet
- Construct a partition berm in the Lake to comply with California Division of Safety of Dams (DSOD) requirements
- Construct a recirculation pump and piping system to circulate the Lake water
- Modify existing storm drains inletting to the Lake to divert low flow urban runoff into the Lake
- Place aquatic emergent plants at various points along the Lake edge
- Various improvements to the Lake's edge and areas adjacent to the Lake's edge
- Replace a majority of the existing asphalt pathway around the Lake perimeter with pervious materials

# INITIAL STUDY PUBLIC WORKS – BUREAU OF ENGINEERING

- Construct hydrodynamic separators in the existing storm drain systems to remove trash and debris
- Construct rain gardens and grassy swales around the Lake
- Upgrade the irrigation system to improve efficiency

As described in this Initial Study, the proposed project may result in significant impacts and would require the implementation of mitigation measures. Further analysis of these environmental issues should be provided in an EIR.

# INITIAL STUDY PUBLIC WORKS - BUREAU OF ENGINEERING

### B. Recommended Environmental Documentation

On the basis of this initial evaluation, I find that the proposed project would have a significant effect on the environment, and an **Environmental Impact Report** should be prepared.

Kendrick Okuda, Program Manager Prop O Clean Water Bond Bureau of Engineering 1149 S. Broadway, 6th floor Los Angeles, CA 90015

April 20, 2009

Dear Mr. Okuda: Crianne

2009 APR 21 PM 1: 17

The Los Angeles Audubon Society has followed with great interest the activities of the Proposition O projects overseen by the Bureau of Engineering. We have particular concerns about the progress of the Echo Park Lake Rehabilitation Project.

According to the Proposition O Program Master Schedule (January 2009 report), construction on the Echo Park Lake Rehabilitation Project is scheduled to beginning in late 2010-early 2011. This is right in the middle of the fall-winter bird migration season.

The Echo Park Rehabilitation Project Concept Report and Technical Memo 4 – Wildlife Relocation Plan includes a listing of birds that have been reported at the park during the Christmas Bird Counts, starting in the year 2000. To date, about 70 species have been noted at the lake.

Wetlands are at a premium in California and scientific reporting over the years indicates that about 90-95% of our natural wetlands have disappeared. This means even a small lake like Echo Park Lake is important for migrating birds.

We have two suggestions to maintain the lake for usage by wild birds while construction is underway.

- 1. Keep the lake partially filled with water, particularly during the migration season. The north end of the lake (near the storm drain and near the lotus pond) is shallower than the middle and southern sections. A temporary dam or berm could be put in place to retain water there. When work on the larger section of the lake is complete, it could be refilled and then work can begin on the north end of the lake.
- 2. Delay construction until the end of the 2010-2011 migration season to allow a complete migration cycle. This will especially benefit the great blue herons that have been nesting at the lake each year for the last five years.

There is another benefit to waiting until spring of that year to drain the lake — more hours of daylight. Indeed, would it not be possible to take advantage of the longer days to work longer hours? Perhaps a schedule can be worked out to have the lake work completed before the start of the next migration season (the fall of 2011) and then refill the lake for that season's visiting birds.

We look forward to receiving your comments.

Yours truly,

Mary Loquvam

Ms. Maria Martin, Environmental Supervisor City of Los Angeles Department of Public Works Bureau of Engineering, EMG 1149 S. Broadway, Suite 600, Mail Stop 939 Los Angeles, CA 90015

Dear Ms. Martin:

# Notice of Preparation of a Draft Environmental Impact Report (Draft EIR) for the <u>Echo Park Lake Rehabilitation Project</u>

The South Coast Air Quality Management District (SCAQMD) appreciates the opportunity to comment on the above-mentioned document. The SCAQMD's comments are recommendations regarding the analysis of potential air quality impacts from the proposed project that should be included in the draft environmental impact report (EIR). Please send the SCAQMD a copy of the Draft EIR upon its completion. In addition, please send with the draft EIR all appendices or technical documents related to the air quality analysis and electronic versions of all air quality modeling and health risk assessment files. Electronic files include spreadsheets, database files, input files, output files, etc., and does <u>not</u> mean Adobe PDF files. Without all files and supporting air quality documentation, the SCAQMD will be unable to complete its review of the air quality analysis in a timely manner. Any delays in providing all supporting air quality documentation <u>will require</u> additional time for review beyond the end of the comment period.

#### **Air Quality Analysis**

The SCAQMD adopted its California Environmental Quality Act (CEQA) Air Quality Handbook in 1993 to assist other public agencies with the preparation of air quality analyses. The SCAQMD recommends that the Lead Agency use this Handbook as guidance when preparing its air quality analysis. Copies of the Handbook are available from the SCAQMD's Subscription Services Department by calling (909) 396-3720. Alternatively, the lead agency may wish to consider using the California Air Resources Board (CARB) approved URBEMIS 2007 Model. This model is available on the SCAQMD Website at: <a href="https://www.urbemis.com">www.urbemis.com</a>.

The Lead Agency should identify any potential adverse air quality impacts that could occur from all phases of the project and all air pollutant sources related to the project. Air quality impacts from both construction (including demolition, if any) and operations should be calculated. Construction-related air quality impacts typically include, but are not limited to, emissions from the use of heavy-duty equipment from grading, earth-loading/unloading, paving, architectural coatings, off-road mobile sources (e.g., heavy-duty construction equipment) and on-road mobile sources (e.g., construction worker vehicle trips, material transport trips). Operation-related air quality impacts may include, but are not limited to, emissions from stationary sources (e.g., boilers), area sources (e.g., solvents and coatings), and vehicular trips (e.g., on- and off-road tailpipe emissions and entrained dust). Air quality impacts from indirect sources, that is, sources that generate or attract vehicular trips should be included in the analysis.

The SCAQMD has developed a methodology for calculating PM2.5 emissions from construction and operational activities and processes. In connection with developing PM2.5 calculation methodologies, the SCAQMD has also developed both regional and localized significance thresholds. The SCAQMD requests that the lead agency quantify PM2.5 emissions and compare the results to the recommended PM2.5 significance thresholds. Guidance for calculating PM2.5 emissions and PM2.5 significance thresholds can be found at the following internet address: <a href="http://www.aqmd.gov/ceqa/handbook/PM2\_5/PM2\_5.html">http://www.aqmd.gov/ceqa/handbook/PM2\_5/PM2\_5.html</a>.

In addition to analyzing regional air quality impacts the SCAQMD recommends calculating localized air quality impacts and comparing the results to localized significance thresholds (LSTs). LST's can be used in addition to the recommended regional significance thresholds as a second indication of air quality impacts when preparing a CEQA document. Therefore, when preparing the air quality analysis for the proposed project, it is recommended that the lead agency perform a localized significance analysis by either using the LSTs developed by the SCAQMD or performing dispersion modeling as necessary. Guidance for performing a localized air quality analysis can be found at <a href="http://www.aqmd.gov/ceqa/handbook/LST/LST.html">http://www.aqmd.gov/ceqa/handbook/LST/LST.html</a>.

In the event that the proposed project generates or attracts vehicular trips, especially heavy-duty diesel-fueled vehicles, it is recommended that the lead agency perform a mobile source health risk assessment. Guidance for performing a mobile source health risk assessment ("Health Risk Assessment Guidance for Analyzing Cancer Risk from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis") can be found on the SCAQMD's CEQA web pages at the following internet address: <a href="http://www.aqmd.gov/ceqa/handbook/mobile\_toxic/mobile\_toxic.html">http://www.aqmd.gov/ceqa/handbook/mobile\_toxic/mobile\_toxic.html</a>. An analysis of all toxic air contaminant impacts due to the decommissioning or use of equipment potentially generating such air pollutants should also be included.

## Mitigation Measures

In the event that the project generates significant adverse air quality impacts, CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized during project construction and operation to minimize or eliminate significant adverse air quality impacts. To assist the Lead Agency with identifying possible mitigation measures for the project, please refer to Chapter 11 of the SCAQMD CEQA Air Quality Handbook for sample air quality mitigation measures. Additional mitigation measures can be found on the SCAQMD's CEQA web pages at the following internet address: <a href="https://www.aqmd.gov/ceqa/handbook/mitigation/MM">www.aqmd.gov/ceqa/handbook/mitigation/MM</a> intro.html Additionally, SCAQMD's Rule 403 – Fugitive Dust, and the Implementation Handbook contain numerous measures for controlling construction-related emissions that should be considered for use as CEQA mitigation if not otherwise required. Other measures to reduce air quality impacts from land use projects can be found in the SCAQMD's Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning. This document can be found at the following internet address: <a href="http://www.aqmd.gov/prdas/aqguide/aqguide.html">http://www.aqmd.gov/prdas/aqguide/aqguide.html</a>. In addition, guidance on sitting incompatible land uses can be found in the California Air Resources Board's Air Quality and Land Use Handbook: A Community Perspective, which can be found at the following internet address: <a href="http://www.arb.ca.gov/ch/handbook.pdf">http://www.arb.ca.gov/ch/handbook.pdf</a>. Pursuant to state CEQA Guidelines §15126.4 (a)(1)(D), any impacts resulting from mitigation measures must also be discussed.

### **Data Sources**

SCAQMD rules and relevant air quality reports and data are available by calling the SCAQMD's Public Information Center at (909) 396-2039. Much of the information available through the Public Information Center is also available via the SCAQMD's World Wide Web Homepage (<a href="http://www.aqmd.gov">http://www.aqmd.gov</a>).

The SCAQMD is willing to work with the Lead Agency to ensure that project-related emissions are accurately identified, categorized, and evaluated. Please call Daniel Garcia, Air Quality Specialist, CEQA Section, at (909) 396-3304 if you have any questions regarding this letter.

Sincerely,

Susan Nakamura Planning Manager

Ms. Maria Martin **Environmental Supervisor** City of Los Angeles Department of Public Works Bureau of Engineering, EMG 1149 S. Broadway, Suite 600, Mail Stop 939 Los Angeles, CA 90015-2213

Dear Ms. Martin:

Thank you for the opportunity to comment on the Notice of Preparation (NOP) for the Echo Park Lake Rehabilitation Project. This letter conveys recommendations from the Los Angeles County Metropolitan Transportation Authority (Metro) concerning issues that are germane to our agency's statutory responsibilities in relation to the proposed project.

A Traffic Impact Analysis (TIA), with highway, freeway, and transit components, is required under the State of California Congestion Management Program (CMP) statute. The CMP TIA Guidelines are published in the "2004 Congestion" Management Program for Los Angeles County", Appendix B. The geographic area examined in the TIA must include the following, at a minimum:

- All CMP arterial monitoring intersections, including monitored freeway on/off-ramp intersections, where the proposed project will add 50 or more trips during either the a.m. or p.m. weekday peak hour (of adjacent street traffic); and
- Mainline freeway-monitoring locations where the project will add 150 or more trips, in either direction, during either the a.m. or p.m. weekday peak hour.

Among the required steps for the analysis of development-related impacts to transit are:

- Evidence that in addition to Metro, all affected Municipal transit operators received the NOP for the Draft EIR;
- 4. A summary of the existing transit services in the area;
- 5. Estimated project trip generation and mode assignment for both morning and evening peak periods;
- Documentation on the assumptions/analyses used to determine the number and percentage of trips assigned to transit;
- Information on facilities and/or programs that will be incorporated into the development plan that will encourage public transit usage and transportation demand management (TDM) policies and programs; and
- An analysis of the expected project impacts on current and future transit services along with proposed project mitigation.

Metro looks forward to reviewing the Draft EIR. If you have any questions regarding this response, please call me at 213-922-6908 or by email at chapmans@metro.net. Please send the Draft EIR to the following address:

DRAFT ENVIRONMENTAL IMPACT REPORT FOR ECHO PARK LAKE REHABILITATION PROJECT, LOS ANGELES, LOS ANGELES COUNTY (SCH 2009091036)

Dear Ms. Martin:

The Department of Toxic Substances Control (DTSC) has reviewed the Notice of Preparation (NOP) dated September 10, 2009, for the subject project. The due date to submit comments is October 12, 2009. Based on a review of the NOP, DTSC would like to provide the following comments:

- 1. The proposed project consists of making improvements at the existing lake as part of implementing the Clean Water Bond Program.
- 2. Three open leaking underground storage tank (LUST) clean up sites are located within 0.25 miles from the project site. Contaminants associated with these LUST locations may have the potential to migrate to the site via groundwater and/or soil gas pathways. DTSC recommends that these environmental concerns be investigated using DTSC's "Advisory - Active Soil Gas Investigations, dated January 2003" and DTSC's "Vapor Intrusion Guidance Document - Final Interim, dated December 15, 2004."

If you would like to discuss this matter further, please contact me at (818) 717-6617 or kchiang@dtsc.ca.gov, or Grant Dalton at (818) 717-6619 or gdalton@dtsc.ca.gov.

Sincerely,

Ken Chiang

Dear Ms. Martin:

(213) 897-1337

FAX

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the Notice of Preparation (NOP) of an Environmental Impact Report for the Echo Park Lake Rehabilitation Project. The project site is located at 751 Echo Park Avenue. Based on the information received, we have the following comments:

We recommend that construction related truck trips on State Highways be limited to off-peak commute periods especially along congested commuter corridors such as the US-101 (Hollywood Freeway) located just to the south of the project site and State Route 2 (Alvarado Street/Glendale Boulevard/Glendale Freeway) located approximately 1 mile to the north. The contractor should avoid platooning of truck trips on mainline freeways, on freeway on/off-ramps and at freeway ramp intersections. Transport of over-size or over-weight vehicles on State Highways will need a Caltrans Transportation Permit.

Construction related staging areas should not occur near Echo Park Avenue and Bellevue Avenue (US-101 northbound off-ramp and on-ramp).

If you have any questions, you may reach me at (213) 897-6696 and please refer to our record number 090913/CS.

Sincerely,

ELMER ALVAREZ

**Subject:** PROP O

Greetings, Alfred:

Thanks for coming to the Park Advisory Board Meetings as well as keeping the community appraised about the Prop O Project.

My Comments on the Plan as seen last week:. Please forward as needed to be included in comments:

1. The filtering system has to be moved out of the park.

All trash cannot be allowed to sit around in the Lake until it gets cleaned out.

The system needs to be in the street itself where it can be cleaned out

easily.

2. The pump house needs to be in keeping with the architecturally features noted on the boat House and the Recreation Center.

Can it be a combined with the present kayak/motor boat storage that lies

next to the toilets by the Boat House?

3. The marsh/wet lands with broad walk to North East of Park that is planned

in the Lake area adjacent to the Island, has to be re-thought.

(a) This is a refuge for the avian and reptile(turtles/tortoise) population.

Foot traffic has to be banned from the island.

If anything, with the loss of the wet land islands

currently in place the

area

island should be extended southwards/enlarged and a wading

offered to birds like the herons.

We need to see a better planned habitat than is currently in the plans.

(b) Cleaning marshland of debris and food dumped by people will be very

labor intensive to remove.

The necklace of marshes around the sides of the Lake must be removed.

4. I see no data and no figures on the upkeep and maintenance of the site post Prop O.

Can we get some rough figures?

--- Does the Department of Recreation and Parks have resident biologist and

botanist to make informed decisions on a daily basis?

The fact that a cormorant was left to suffer a painful

experience for some five days

entangled in fishing line before anything could be done is unacceptable.

If a bird population is to be maintained, it should be managed adequately

and in a humane manner.

5. I see no scientific information as to avian and reptile population that area can

sustain.

(b) I see no plan as to the schedule related to the removal of the wildlife  $% \left( 1\right) =\left( 1\right) \left( 1\right$ 

currently residing at the site and the number that are migratory and domestic

or migratory and now domesticated year-round residents.

(c) The pigeon population explosion has to be addressed beginning now.

How does Prop O plan to handle this?

(d) Mention was made to push the date the Prop O Project begins to sometime April instead of January.

However, given the need of the avian population to raise its young,

please review the mating and raising of young issues of this avian population.

It would seem that this must be a concern. As late as the Lotus Festival (July)

ducks were seen with ducklings.

Again, this needs to be clarified.

6. Sometime when Prop O begins, the Angelus Temple/Four Square Heritage Foundation will commence with a huge 70+ high rise at the corner of Glendale

and Park Avenue.

Has this been taken into consideration?

- 7. Little has been made of the numerous changes make to the lawn with each staged
- ---- event at the site. Depending on floor/site plans, cables are run throughout the

area

---- In addition, a great deal of cooking and food preparation occurs in the north

east corner. Spilt oil and waste is inevitable.

--- In addition, the Fire Department trains at the lake, running hose into/out of the

Lake

How does Prop O maintain the integrity of the site/water quality post Prop O?

8. How does the City plan to address the concerns of pollution entering the Lake

via storm drains after Prop O?

\_\_\_\_\_

Where will the Lake Tour for Prop O meet on Tuesday. Please let me know.

With thanks.

Ida Talalla Echo Park TAP ( Trash Abatement Project)

**Subject:** Echo Park Lake, Prop O recommendation

Dear Ms. Martin,

I have been following plans for draining and rehabilitating the Echo Park Lake from the beginning of public hearings.

One issue, which has been consistently mentioned at meetings is the community's concern for wildlife living in the park. This wildlife, most notably birds, depends on our lake for nesting and general habitat. Additionally, citizens of Echo Park and the rest of Los Angeles who use the park do so in large part because of the variety of wildlife present there. People count on seeing birds nesting and raising young at Echo Park Lake.

I understand that no provision has been recommended through the Environmental Impact Report to provide water and nesting habitat for resident birds during the period of construction.

I urge that the designers consider partial retention of water in the lake during construction. Under this condition the existing population of water birds would at least have a chance of remaining to live in our park during construction and we would thereby have a hope that our birds would continue to thrive here in the newly constructed lake thereafter.

If the State of California Department of Fish and Game has not weighed in on this issue, they should. It seems to me unconscionable that birds in our park would not be at least partially provided for in the interim during construction.

Sincerely, Jonathan Williams

To: Maria.Martin@lacity.org
Subject: Enjoyed your write-up

Hi Maria,

Just a note to say that i found your write-up about the future of the lake very informative.

I am planning to purchase a property there, and it is good to know that Echo Park has people who care about the environment and the community feel of the area.

If you have some advice as to whom to turn in real estate matters I would really appreciate your advice. We are looking for something we could renovate, in a medium price range, maybe 300K.

Jest regards,

Jaana

Re Draft Environmental Report, Echo Park Rehabilitation Project Echo Park Comments

#### Dear Sirs/Ms.:

Shortly after the Final Concept Report for this project was issued, the Echo Park Advisory Board wrote to the attention of Kendrick Okuda, outlining some concerns it had with several items discussed in the Report. (For easy reference, I am including a copy of that letter, dated August 27, 2007.)

Since that time, some of the PAB's questions have been addressed, but the matter concerning draining the lake and its effect on migratory birds is still open.

#### Below is the PAB comment from that letter:

2. On page 2-5, section 2.2, Current Environmental Setting, the document points out that the area containing the lotus beds is the shallowest part of the lake, where water levels are less than 2 feet, and that the lotus bed is contained behind an aquatic plant control dam (at the southern end of the lotus bed area) to keep sediments associated with the lotus plants from dispersing into the lake. The balance of the lake ranges in depth from 3 to 8 feet. The height of the perimeter walls range from 1.5 feet to 4 feet.

Over the past 7 years, a Christmas Bird Count has been done at Echo Lake. Additional counts have been done during other parts of the calendar years as well, and to date, over 60 species of birds have been identified. Most species have been seen during the fall through spring migration period.

We are concerned that draining the lake for an extended period of time will impact on Echo Lake's ability to function as a rest and refueling stop for birds. While Echo Lake is small, it does serve its purpose as a waystation during the migration season. Because so much of California's wetlands have already been lost, even a small area like Echo Lake is important.

We think the engineers should find a way to keep the lake partially filled with water during the migration season, either by the use of temporary dams or other means that would allow the lake bed to retain some water. For example, the height of the control dam at the end of the lotus beds could be increased. Due to the irregularity of the depth of the lake, other points could be selected to hold water to accommodate waterfowl during the reconstruction process.

From what I can see in the Initial Study, in the section labeled "Biological Resources," the BOE is already aware of "Potentially Signif. (Impact) Unless Mitigation Incorporated). Indeed, this box is checked for several items, including number 4, which discusses migratory birds and a wildlife removal plan.

I cannot find any reference in this document that you are considering partial retention of water in the lake during the migration season as a solution to the item referenced above. Nor can I find any reference that acknowledges that the migration season for birds is roughly from October to April. In view of the fact that your estimated start of construction is January 2011 — right in the middle of the migratory season when water birds need the lake most — I ask that you rethink both of these situations: Leave some water in the lake and hold off the beginning of construction until the migratory season comes to an end, around May, 2011.

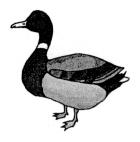

Yours truly,

ludith Raskin

(member, Park Advisory Board)

# Echo Park Advisory Board

Echo Park Lake Echo Park Recreation Center Echo Park Pool

August 27, 2007

Mr. Kendrick Okuda, Program Manager Bureau of Engineering 1149 South Broadway, 6<sup>th</sup> Floor Los Angeles, CA 90015

Dear Mr. Okuda:

Re: Echo Park Lake Rehabilitation, Proposition O Project Final Concept Report

The Park Advisory Board for Echo Park and its Lake have followed with great interest the progress of the Concept Report as it made it way to approval as a Proposition O project.

We have attended several of your meetings (both Administrative Oversight Committee and Citizens Oversight Advisory Committee) as well as City Council meetings dealing with this project. We have copies of the Final Concept Report and we have read it.

We wish to notify you of some concerns we have at this time.

1. On pages ES-1 and ES-2 of the Report, in the "Project Overview" section, it says that "attempting to address the bacteria issues through implementation of advanced technological means such as UV systems is not recommended." It says that inasmuch as bacterial loading in the lake is the result of natural causes, "best management practices (BMP)" is the way to address this problem.

We would like to know why technological means such as UV are not recommended. We would also like to know to the exact type of "best management practices" that you recommend instead of technological means to address high bacterial counts. Would you provide us with some details?

2. On page 2-5, section 2.2, Current Environmental Setting, the document points out that the area containing the lotus beds is the shallowest part of the lake, where water levels are less than 2 feet, and that the lotus bed is contained behind an aquatic plant control dam (at the southern end of the lotus bed area) to keep sediments associated with the lotus plants from dispersing into the lake. The balance of the lake ranges in depth from 3 to 8 feet. The height of the perimeter walls range from 1.5 feet to 4 feet.

Over the past 7 years, a Christmas Bird Count has been done at Echo Lake. Additional counts have been done during other parts of the calendar years as well, and to date, over 60 species of birds have been identified. Most species have been seen during the fall through spring migration period.

We are concerned that draining the lake for an extended period of time will impact on Echo Lake's ability to function as a rest and refueling stop for birds. While Echo Lake is small, it does serve its purpose as a waystation during the migration season. Because so much of California's wetlands have already been lost, even a small area like Echo Lake is important.

We think the engineers should find a way to keep the lake partially filled with water during the migration season, either by the use of temporary dams or other means that would allow the lake bed to retain some water. For example, the height of the control dam at the end of the lotus beds could be increased. Due to the irregularity of the depth of the lake, other points could be selected to hold water to accommodate waterfowl during the reconstruction process.

3. On page 3-5, in the section 3.3.1 In-Lake Basin and Storm Drain Improvements, the report addresses the matter of Lake Aeration. Currently, a pump house just to the south of the lotus ponds contains the machinery that controls the aeration system.

This is a rather unattractive brick structure set at a natural view point on the lake. We would like to ask that the replacement system be built underground or at a location that would not mar the view of the lake.

4. On page 3-13 through 3j-15, in the section 3.3.3 Parkland Structural BMPS, there is a section called "Educational Signage and Kiosks." This section only addresses signage and kiosks that would advise of the improvements that have been made to water quality.

The Echo Park PAB believes additional signage is necessary to advise park users of selected "park usage rules" to replace the missing signage or faded signs current on view. The type of notices on these signs would address matters such as dog walking, fishing, littering (including dumping of food), hours of operation, etc. There are no kiosks in Echo Park at this time, but we believe their inclusion at several places in the park would be beneficial to allow the display of both permanent and temporary notices. We think all signage should be in English, Spanish and other languages that reflect the language demographics of the community..

Ms. Judith Raskin, a member of the Echo Park PAB, is our Prop O information representative. She is the person you should add to your mailing lists for advisories or other documents relating to the project.

At this time, we are most anxious to know about your "pre-planning" meetings and the time line for community participation. We would also like to invite you to attend a future PAB meeting to discuss the project. Perhaps we can arrange a date in the month of October.

Yours truly,

Thomas L. DeBoe, Chairman Mailing address: 650 Echo Park Avenue, Los Angeles, CA 90026 213-482-4236

Attn: Ms. Maria Martin, Environmental Supervisor City of Los Angeles Department of Public Works Bureau of Engineering, EMG 1149 S. Broadway, Suite 600, Mail Stop 939 Los Angeles, CA 90015-2213

October 4, 2009

Dear Ms. Martin

The Los Angeles Audubon Society has followed with great interest the activities of the Proposition O projects overseen by the Bureau of Engineering. We have particular concerns about the progress of the Echo Park Lake Rehabilitation Project.

According to the Proposition O Program Master Schedule (January 2009 report), construction on the Echo Park Lake Rehabilitation Project is scheduled to beginning in late 2010-early 2011. This is right in the middle of the fall-winter bird migration season.

The Echo Park Rehabilitation Project Concept Report and Technical Memo 4 – Wildlife Relocation Plan includes a listing of birds that have been reported at the park during the Christmas Bird Counts, starting in the year 2000. To date, about 70 species have been noted at the lake.

Wetlands are at a premium in California and scientific reporting over the years indicates that about 90-95% of our natural wetlands have disappeared. This means even a small lake like Echo Park Lake is important for migrating birds.

We have two suggestions to maintain the lake for usage by wild birds while construction is underway.

1. Keep the lake partially filled with water, particularly during the migration season. The north end of the lake (near the storm drain and near the lotus pond) is shallower than the middle and southern sections. A temporary dam or berm could be put in place to retain water there. When work on the larger section of the lake is complete, it could be refilled and then work can begin on the north end of the lake.

2. Delay construction until the end of the 2010-2011 migration season to allow a complete migration cycle. This will especially benefit the great blue herons that have been nesting at the lake each year for the last five years.

There is another benefit to waiting until spring of that year to drain the lake —more hours of daylight. Indeed, would it not be possible to take advantage of the longer days to work longer hours? Perhaps a schedule can be worked out to have the lake work completed before the start of the next migration season (the fall of 2011) and then refill the lake for that season's visiting birds.

We look forward to receiving your comments.

Yours truly,

Mary Loquvam

RE: ECHO PARK EIR NOP COMMENTS

Dear Ms. Martin,

Thank you for the opportunity to submit comments on the Notice of Preparation for the Echo Park Rehabilitation project Environmental Impact Report. On behalf of the Cultural Heritage Commission, the following comments are made:

- The Initial Study should identify the Cultural Heritage Commission as a review/approval 1. body for the proposed project since the property is Historic-Cultural Monument No. 836. (Initial Study page 8)
- There is potentially conflicting information presented in the Initial Study item 18 -2. Mandatory Findings of Significance - and the Draft Cultural Resources Report (September 2008). The Mandatory Findings of Significance states that "Mitigation measures would be required to ensure that no historical resources are adversely impacted by the construction of the proposed project." (Initial Study page 40) The Draft Cultural Resources Report states that additional wetland vegetation is an acceptable addition to the lake (page 66). The mitigation measure identified is the application and use of the Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for the Treatment of Cultural Landscapes (Guidelines). The design concepts presented to date show a potential adverse impact to the historic character of the lake and lake edge as it relates to the simplicity of the open body of water that is a character-defining feature of the historic resource. The Guidelines recommend against such alterations. Modifying the lake's edge and the introduction of new wetland areas may be an unavoidable adverse impact. Alternatively, designs that are compatible with the Guidelines may need to be explored.

Maria Martin Echo Park EIR NOP Comments October 5, 2009 Page 2 of 2

3. The Draft Cultural Resources Report states "Avoid the addition of designed structures in the lake such as new islands, new bridges, boardwalks, or cantilevered walks." (page 63) The project includes the addition of a boardwalk and a cantilevered walk that may be in conflict with the Report.

We are eager to have the team present the project concept to the Cultural Heritage Commission during the EIR process. The Commission meets the first and third Thursdays of the month. Please let us know when you would like to present. I may be reached at (213) 978-1183.

Sincerely

Lambert M. Giessinger, Architect Office of Historic Resources

Rec 10/6/09

### COMMENTS ON THE ENVIRONMENTAL IMPACT OF THE PROPOSED IMPROVEMENT PLAN FOR ECHO PARK LAKE

Submitted by Mary Steffens, Echo Park, October 5, 2009

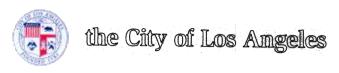

1. The greatest environmental impact will be on the resident wildlife. particularly the birds who live and nest there year round: the black crowned night herons, coots, mallards, the great white-fronted geese, the flock of white geese and the lone small black goose. The geese in particular have an established pecking order. Some have been injured and no longer fly. The most humane protective option would be to begin the construction phase by draining a section adjacent to the island sanctuary and prepare and plant a wetland there. This will minimize the trauma of the resident birds by giving them a refuge while the rest of the lake is rehabilitated.

Nesting occurs in Spring. The construction phase should begin in May, not January. Again, constructing a wetland area as the first order of business will allow some nesting to occur. The island palms and tall pines should be retained for the great blue heron nests.

- 2. The lotus recovery plan will fail if the turtle population is allowed to remain. Over the years people have released turtle pets into the lake, mostly redeared sliders. This population has exploded. They are rapacious eaters of baby ducks (by pulling them under water) and young lotus shoots. Signage in English, Spanish and Chinese is needed to educate people about the danger turtles pose to infant wildlife and baby lotuses.
- 3. Trees: Echo Park Lake is home to some old and unusual trees. The Hibiscus tree, the Melaleucas, and the seven African Wattles (Peltophorum africanum) come immediately to mind. The African Wattles are so rare in fact that they have been declared city Heritage Trees. Equally rare are the two Dawn Redwoods (Metasequoia glyptostroboides) on the Glendale Bl. side of the lake. These water-loving deciduous redwoods are extremely rare in Southern California simply because they require more water than our climate provides. Hence their lakeside location has been perfect. Their roots actually form a beautiful lake edge wall. The proposed wetland for that area needs to be constructed so these trees continue to receive the water they need. The lake park will not be improved at all if the old and established landmark trees are removed.

Trank you for the opportunity to make these Comments. Sincerely, Mary Steffens 1864 Lembyne St. 20026

Ms. Maria Martin, Environmental Supervisor City of Los Angeles, Department of Public Works Bureau of Engineering, EMG 1149 South Broadway, Suite 600, Mail Stop 939 Los Angeles, California 90015-2213

Dear Ms. Martin:

Subject: Notice of Preparation (NOP) of a Draft Environmental Impact Report for the

Echo Park Lake Rehabilitation Project

The Los Angeles Department of Water and Power (LADWP) is in receipt of your NOP dated September 10, 2009. LADWP appreciates the opportunity to provide input on the scope and content of the Environmental Impact Report as you begin the planning and environmental review process for the Echo Park Lake Rehabilitation Project pursuant to the California Environmental Quality Act (CEQA).

One component of the CEQA Guidelines includes a public agency's duty to minimize environmental damage and balance competing public objectives. Water supply and availability is one public objective for which LADWP is accountable and as you are aware, water supply issues are of particular concern to LADWP. Last year, the City of Los Angeles (City) received the lowest rainfall on record, our own Los Angeles Aqueduct supply from the Eastern Sierra was at near record lows, and snowpack for the rest of California was also well below normal. In addition, a Federal Court ruling last year has resulted in reduced exports from the Delta to the State Water Project, the major source of supply to the Metropolitan Water District of Southern California, who we have increasingly relied upon to meet our water supply needs.

Continued development in the City of Los Angeles has generated concern of having sufficient water supplies to meet the increased needs. The LADWP Urban Water Management Plan (UWMP), last adopted in 2005, recognizes and accounts for periods of dry conditions and also anticipates both population growth and increased water demands. In light of the recent events, the LADWP has been undergoing a closer examination of what steps the City must take to ensure the water supply goals of the UWMP are achieved in order to have a sustainable water supply for the City.

The 2005 UWMP calls for increased water conservation continually through 2030, which is as far as the plan forecasts. Conservation goals are broken down in 5-year increments. By 2010, the plan calls for 5,000 acre-feet per year of additional water conservation savings.

### Water and Power Conservation ... a way of life

Ms. Maria Martin Page 2 October 7, 2009

In order to achieve the anticipated water conservation savings identified in the UWMP, all new construction needs to include where applicable the standard water conserving measures and devices that are identified in this letter. Your assistance is necessary and appreciated to meet the required water conservation goals to ensure adequate water supplies for the future.

#### **WATER CONSERVATION DEVICES AND MEASURES**

- High efficiency toilets (1.28 gallons per flush or less, includes dual flush)
- Ultra low water urinals (0.25 gallons per flush or less, includes waterless)
- Restroom faucet flow rate of 1.5 gallons per minute or less
- Public restroom self-closing faucets
- Showerhead flow rate of 2.0 gallons per minute or less
- Limit of one showerhead per shower stall
- High efficiency clothes washers (water factor of 6.0 or less)
- High efficiency dishwashers (Energy Star rated)
- Domestic water heating system located in close proximity to point(s) of use, as feasible; use of tankless and on-demand water heaters as feasible
- Cooling towers must be operated at a minimum of 5.5 cycles of concentration
- Require onsite water recycling systems for wastewater discharge for commercial laundries, dye houses, food processing, certain manufacturing operations, etc. (subject to a payback threshold of five years or less). Mandate water recycling system for all new car wash facilities.
- Strict prohibition of single-pass cooling
- Irrigation system requirements
  - Weather-based irrigation controller with rain shutoff
  - o Flow sensor and master valve shutoff (large landscapes)
  - o Matched precipitation (flow) rates for sprinkler heads
  - o Drip/microsprav/subsurface irrigation where appropriate
  - o Minimum irrigation system distribution uniformity of 75 percent
  - Proper hydro-zoning, turf minimization and use of native/drought tolerant plant materials
  - Use of landscape contouring to minimize precipitation runoff

#### Metering

- All dwelling units/commercial spaces require individual metering and billing for water use
- All irrigated landscapes of 5,000 square feet or more require separate metering or submetering

Mandated use of recycled water (where available) for appropriate end uses (irrigation, cooling towers, sanitary)

Standard Urban Stormwater Mitigation Plan (SUSMP). Compliance with all City of Los Angeles SUSMP requirements, and encouraging implementation of Best Management Practices that have stormwater recharge or reuse benefits. For more information, visit: http://www.lastormwater.org/Siteorg/businesses/susmp/susmpintro.htm.

Subject: Echo Park Comments

Dear Maria,

From what I have seen from the design, my main concern is that by not replacing the wetland / grass islands the bird population will not have a place to be unmolested by people (even if it's just noise and movement), and urban animals (rats!). Every evening I see those islands, they are heavily populated by birds, presumably nesting. I think that in an urban environment they need all the protection they can get. With nesting, in particular, maintaining that distance from disturbance is critical. It would a shame if the habitat potential of the lake was diminished by all of these improvements.

I know that the wetland island technology and execution has progressed. Please don't reduce the habitat!

Here is a place that creates these islands: <a href="http://www.floatingislandswest.com/">http://www.floatingislandswest.com/</a>

I and other residents have brought this up in meeting, with no real consideration or expert response.

Best,

#### Alex

**Subject:** Additional Comments- Prop O

Ms. Maria Martin Environmental Supervisor 1, Bureau of Engineering Department of Public Works, City of Los Angeles.

Dear Ms. Martin:

Re: Prop O at Echo Lake.

Earlier I had made a few observations and expressed concerns. Please add these last few comments to ones made earlier.

(a) Given that historically, the Lake once had two sections with Lotus, why is a larger Lotus bed not being considered or reverting to the two locations a consideration?

I feel that a larger Lotus bed would benefit the community and enhance the beauty of the Lake.

(b) Scant attention has been given to entryways into Echo Park.

The absence of framing does not enhance the Park.

- e.g At the Park Avenue -Lemoyne entrance (Main entrance) one is presented with the public toilets to the left and to the right five rolling metal trash bins.
  - -- The entrance from Montrose that overlooks the Lotus bed has no distinctive feature except for a rusting water line.
  - -- Park and Echo Park corner frames the island so a broad walk with railing will be a detraction.
    - It will also bring people too close to the waterfowl. This is not a petting zoo and an effort to change the culture of feeding waterfowl must be discouraged.
- -- Another area of concern is at the southern end. The pump house must fall below the sight line as one comes off the Echo Park exit. Could it be placed slightly off center to the right and built into the hillside/slope? Architecture to mirror that of the boat house or the Recreation Center.
- (c) The necklace of marshland skirting the sides of Lake provides no protective nesting areas for waterfowl. Furthermore, the cost of maintaining these wetlands has not been addressed.
- (d) While Prop O will address the issue of the Lake and water improvement, the surrounding landscape has been as neglected and needs to be looked at in greater detail.

Is there any way that additional funds can be identified for improving the surrounding area?

- (e) Site use of the land area must be planned more thoroughly and permanent features such as electrical outlets, cable lines etc considered. The constant digging up of the lawns to accommodate a variety of events and uses causes erosion and impacts the landscape over time. Also a designated cooking area must be determined and special floor treatment considered.
- (f) The maintenance budget and staffing has to be a consideration that must be included in the operations budget.
- (g) The safety of wildlife/waterfowl must be a concern throughout the process. Who is responsible for monitoring this? Detailed plans are necessary and should also include post Prop O monitoring.
- (h) Perhaps not part of the environmental report but one that is needed is a large outdoor story board in Spanish, English, Chinese, Korean, Thai and Tagalong to prepare and inform the community of the Prop O Project. Many in the community do not attend meetings but use the park throughout the day.
- (i) Additional information is needed on the maintenance of the Lotus bed and type selected. What has become of earlier attempts to grow the lotus seeds taken from the Lotus bed? Will some of these be included? What is the long term care and monitoring?
- (j) How will soil left out to dry be controlled so that it does not blow all over the place? Will contaminated soil be identified as such and fenced off?

With thanks and looking forward to the report.

To: Maria.Martin@lacity.org
Subject: Echo Park Comments

Hello Maria,

Sorry this is coming to you last minute, but I have been out sick all week...

Here are some comments for the Draft EIR for Echo Park Lake:

- 1. There should be a thorough investigation into the costs (not just monetary, but also ecological) of draining the lake in parts, as opposed to all at once.
- 2. What will be the effects of the berm on water temperature and quality in the lake? By lowering the overall lake level to meet the criteria to take it out of the province of Dams and Safety, water temperature will certainly rise and may have an overall negative impact on water quality.
- 3. The area of the lotus beds needs to be revisited, as it appeared on the day of the site tour that members from the design team were not aware of the stormwater inlet at the northwest lobe of the lake. How will this stormwater inlet affect the lotus beds (as it was most likely the culprit to their demise), and what remediation can be done at the inlet?
- 4. Are there any plans to look into mycoremediation (using fungal networks for the breakdown of hydrocarbons, heavy metals, petroleum related pollutants, among other pollutants that are on the TMDL list) for stormwater inlets to the lake?

Again, I am sorry for being so late with these comments. Thanks for taking the time to work on this project.

Please add the names Peter Garrison and Nancy Salter to those strongly encouraging the city to be mindful of the birds whose paths take them to Echo Park Lake. Our understanding is that by avoiding draining the whole lake at once the chances of various birds remaining in residence is much greater than otherwise.

Thank you.

#### 1.0 SUMMARY OF FINDINGS

Terry A. Hayes Associates LLC has completed an air quality and noise impact analysis for the proposed Echo Park Lake Rehabilitation Project. Key findings are listed below.

#### 1.1 AIR QUALITY

- Regional Construction Emissions Regional nitrogen oxide emissions would exceed
  the applicable standards without mitigation. Mitigation Measures AQ7 through AQ10
  would reduce nitrogen oxide emissions. However, even with the implementation of
  mitigation, regional nitrogen oxide emissions would still result in a significant air quality
  impact.
- Localized Construction Emissions Localized particulate matter emissions would exceed the applicable standards. Mitigation Measures AQ1 through AQ6 would reduce nitrogen oxide emissions. However, even with the implementation of mitigation, localized particulate matter emissions would still result in a significant impact.
- Construction Toxic Air Contaminants Toxic air contaminant emissions associated with construction activity would result in a less-than-significant impact. Mitigation measures are not required.
- Construction Odors Construction odors would result in a significant impact without mitigation. Mitigation Measures AQ11 through AQ13 would control noxious odors, and construction odors would result in a less-than-significant impact after implementation of mitigation.
- Cumulative Impacts The proposed project would contribute to a cumulatively considerable impact as a result of project-related nitrogen oxide emissions. Mitigation Measures AQ7 through AQ10 would reduce nitrogen oxide emissions. However, even with the implementation of mitigation, regional nitrogen oxide emissions would still result in a cumulatively considerable impact.
- Global Warming Impacts The proposed project would reduce municipal water required to maintain the water level of the Lake, thus reducing associated greenhouse gas emissions. Long-term greenhouse gas emissions would result in a less-thansignificant impact. Mitigation measures are not required.

#### 1.2 NOISE AND VIBRATION

- Construction Noise Construction activity would exceed the applicable standards.
   Mitigation Measures N1 through N4 would reduce noise levels. However, even with the implementation of mitigation, construction noise would still result in a significant impact.
- **Vibration** Construction vibration impacts would result in a less-than-significant impact. Mitigation measures are not required.
- **Cumulative Impacts** Cumulative noise would result in a less-than-significant noise and vibration impact. Mitigation measures are not required.

taha 2009-034 1

#### 2.0 INTRODUCTION

#### 2.1 PURPOSE

The purpose of this report is to evaluate the potential air quality and noise impacts of the proposed Echo Lake Park Rehabilitation Project (proposed project). Potential air quality and noise impacts are analyzed for construction and operation of the proposed project. Mitigation measures for potentially significant impacts are recommended when appropriate to reduce air quality emissions and noise and vibration levels.

#### 2.2 PROJECT DESCRIPTION

The project site is located at 751 Echo Park Avenue within the Echo Park/Silver Lake community of the City of Los Angeles. The project site is bound by Park Avenue on the north, Echo Park Avenue on the east, Bellevue Avenue on the south, and Glendale Boulevard on the west. The project site is also located within the Los Angeles River Watershed. The Hollywood Freeway (US 101) is oriented in an east-west direction in this area of Los Angeles, and is located approximately 0.05 mile (250 feet) south of the project site. The Pasadena Freeway (SR 110) is oriented in a north-south direction and is located approximately 0.8 mile east of the project site. The project site includes a 24-acre portion of Echo Park Lake (Park) which is an open-space recreational facility. The lake occupies 13 acres and is surrounded by 11 acres of open recreational space. A two-acre portion of the Park is located on the south side of Bellevue Avenue and a five-acre portion of the Park is located further south, on the south side of US 101. These seven acres are not a part of the project site.

The estimated duration of the construction of the proposed project is 26 months lasting from January 2011 through February 2013. It is anticipated that the project site would be fenced and closed to the public during the construction phase due to the construction activities. However, the two-acre portion of Echo Park Lake that is located on the south side of Bellevue Avenue and five-acre portion located directly south of US 101 would not be closed during the construction activities on the project site.

Construction activities would include draining the entire Lake to and the sediment that may have accumulated within the Lake. A majority of the removed sediment would require drying, handling and hauling by trucks from the project site to a specified disposal facility. However, any existing soil or sediment that is determined to be useable will be re-used within the Lake bed. The Lake bed would be lined with bentonite-enhanced clay. The existing soil within the Lake bed includes some natural soft and moist clay. The bentonite would be transported from the specified commercial facility to the project site by truck and then mixed with the existing soil within the Lake bed using low-bearing pressure tracked vehicles. It is anticipated that the majority of staging and storage for the Lake bed improvements would occur within the Lake bed itself. It is anticipated that the Lake bed improvements would occur concurrently along with the improvements to the adjacent Park. This would ultimately depend on the amount of available staging space within or near the Park.

taha 2009-034 2

### 3.0 AIR QUALITY

This section examines the degree to which the proposed project may cause significant adverse changes to air quality. Both short-term construction emissions occurring from activities, such as site grading and haul truck trips, and long-term effects related to the ongoing operation of the proposed project are discussed in this section. This analysis focuses on air pollution from two perspectives: daily emissions and pollutant concentrations. "Emissions" refer to the quantity of pollutants released into the air, measured in pounds per day (ppd). "Concentrations" refer to the amount of pollutant material per volumetric unit of air, measured in parts per million (ppm) or micrograms per cubic meter ( $\mu$ g/m³).

## 3.1 POLLUTANTS & EFFECTS

Criteria air pollutants are defined as pollutants for which the federal and State governments have established ambient air quality standards for outdoor concentrations to protect public health. The federal and State standards have been set at levels above which concentrations could be harmful to human health and welfare. These standards are designed to protect the most sensitive persons from illness or discomfort. Pollutants of concern include carbon monoxide (CO), ozone (O<sub>3</sub>), nitrogen dioxide (NO<sub>2</sub>), sulfur dioxide (SO<sub>2</sub>), particulate matter 2.5 microns or less in diameter (PM<sub>2.5</sub>), particulate matter ten microns or less in diameter (PM<sub>10</sub>), and lead (Pb). These pollutants are discussed below.

Carbon Monoxide. CO is a colorless and odorless gas formed by the incomplete combustion of fossil fuels. CO is emitted almost exclusively from motor vehicles, power plants, refineries, industrial boilers, ships, aircraft, and trains. In urban areas such as the project location, automobile exhaust accounts for the majority of CO emissions. CO is a non-reactive air pollutant that dissipates relatively quickly, so ambient CO concentrations generally follow the spatial and temporal distributions of vehicular traffic. CO concentrations are influenced by local meteorological conditions, primarily wind speed, topography, and atmospheric stability. CO from motor vehicle exhaust can become locally concentrated when surface-based temperature inversions are combined with calm atmospheric conditions, a typical situation at dusk in urban areas between November and February. The highest levels of CO typically occur during the colder months of the year when inversion conditions are more frequent. In terms of health, CO competes with oxygen, often replacing it in the blood, thus reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can be dizziness, fatigue, and impairment of central nervous system functions.

**Ozone**.  $O_3$  is a colorless gas that is formed in the atmosphere when reactive organic gases (ROG), which includes volatile organic compounds (VOC), and nitrogen oxides (NO<sub>X</sub>) react in the presence of ultraviolet sunlight.  $O_3$  is not a primary pollutant; it is a secondary pollutant formed by complex interactions of two pollutants directly emitted into the atmosphere. The primary sources of ROG and  $NO_X$ , the components of  $O_3$ , are automobile exhaust and industrial sources. Meteorology and terrain play major roles in  $O_3$  formation. Ideal conditions occur during summer and early autumn, on days with low wind speeds or stagnant air, warm temperatures, and cloudless skies. The greatest source of smog-producing gases is the automobile. Short-term exposure (lasting for a few hours) to  $O_3$  at levels typically observed in Southern California can result in breathing pattern changes, reduction of breathing capacity,

<sup>&</sup>lt;sup>1</sup>Inversion is an atmospheric condition in which a layer of warm air traps cooler air near the surface of the earth, preventing the normal rising of surface air.

increased susceptibility to infections, inflammation of the lung tissue, and some immunological changes.

**Nitrogen Dioxide**.  $NO_2$ , like  $O_3$ , is not directly emitted into the atmosphere but is formed by an atmospheric chemical reaction between nitric oxide (NO) and atmospheric oxygen. NO and  $NO_2$  are collectively referred to as  $NO_X$  and are major contributors to  $O_3$  formation.  $NO_2$  also contributes to the formation of  $PM_{10}$ . High concentrations of  $NO_2$  can cause breathing difficulties and result in a brownish-red cast to the atmosphere with reduced visibility. There is some indication of a relationship between  $NO_2$  and chronic pulmonary fibrosis. Some increase of bronchitis in children (two and three years old) has also been observed at concentrations below 0.3 ppm.

**Sulfur Dioxide**.  $SO_2$  is a colorless, pungent gas formed primarily by the combustion of sulfur-containing fossil fuels. Main sources of  $SO_2$  are coal and oil used in power plants and industries. Generally, the highest levels of  $SO_2$  are found near large industrial complexes. In recent years,  $SO_2$  concentrations have been reduced by the increasingly stringent controls placed on stationary source emissions of  $SO_2$  and limits on the sulfur content of fuels.  $SO_2$  is an irritant gas that attacks the throat and lungs. It can cause acute respiratory symptoms and diminished ventilator function in children.  $SO_2$  can also harm plant leaves and erode iron and steel.

**Particulate Matter**. Particulate matter pollution consists of very small liquid and solid particles floating in the air, which can include smoke, soot, dust, salts, acids, and metals. Particulate matter also forms when gases emitted from industries and motor vehicles undergo chemical reactions in the atmosphere.  $PM_{2.5}$  and  $PM_{10}$  represent fractions of particulate matter. Fine particulate matter, or  $PM_{2.5}$ , is roughly 1/28 the diameter of a human hair.  $PM_{2.5}$  results from fuel combustion (e.g. motor vehicles, power generation, and industrial facilities), residential fireplaces, and wood stoves. In addition,  $PM_{2.5}$  can be formed in the atmosphere from gases such as  $SO_2$ ,  $NO_X$ , and VOC. Inhalable particulate matter, or  $PM_{10}$ , is about 1/7 the thickness of a human hair. Major sources of  $PM_{10}$  include crushing or grinding operations; dust stirred up by vehicles traveling on roads; wood burning stoves and fireplaces; dust from construction, landfills, and agriculture; wildfires and brush/waste burning; industrial sources; windblown dust from open lands; and atmospheric chemical and photochemical reactions.

 $PM_{2.5}$  and  $PM_{10}$  pose a greater health risk than larger-size particles. When inhaled, these tiny particles can penetrate the human respiratory system's natural defenses and damage the respiratory tract.  $PM_{2.5}$  and  $PM_{10}$  can increase the number and severity of asthma attacks, cause or aggravate bronchitis and other lung diseases, and reduce the body's ability to fight infections. Very small particles of substances, such as lead, sulfates, and nitrates can cause lung damage directly. These substances can be absorbed into the blood stream and cause damage elsewhere in the body. These substances can transport absorbed gases, such as chlorides or ammonium, into the lungs and cause injury. Whereas  $PM_{10}$  tends to collect in the upper portion of the respiratory system,  $PM_{2.5}$  is so tiny that it can penetrate deeper into the lungs and damage lung tissues. Suspended particulates also damage and discolor surfaces on which they settle, as well as produce haze and reduce regional visibility.

**Lead**. Pb in the atmosphere occurs as particulate matter. Sources of lead include leaded gasoline; the manufacturers of batteries, paint, ink, ceramics, and ammunition; and secondary lead smelters. Prior to 1978, mobile emissions were the primary source of atmospheric lead. Between 1978 and 1987, the phase-out of leaded gasoline reduced the overall inventory of airborne lead by nearly 95 percent. With the phase-out of leaded gasoline, secondary lead

smelters, battery recycling, and manufacturing facilities have become lead-emission sources of greater concern.

Prolonged exposure to atmospheric lead poses a serious threat to human health. Health effects associated with exposure to lead include gastrointestinal disturbances, anemia, kidney disease, and in severe cases, neuromuscular and neurological dysfunction. Of particular concern are low-level lead exposures during infancy and childhood. Such exposures are associated with decrements in neurobehavioral performance, including intelligence quotient performance, psychomotor performance, reaction time, and growth.

**Toxic Air Contaminants**. A substance is considered toxic if it has the potential to cause adverse health effects in humans. A toxic substance released into the air is considered a toxic air contaminant (TAC). TACs are identified by State and federal agencies based on a review of available scientific evidence. In the State of California, TACs are identified through a two-step process that was established in 1983 under the Toxic Air Contaminant Identification and Control Act. This two-step process of risk identification and risk management was designed to protect residents from the health effects of toxic substances in the air.

**Greenhouse Gases**. Greenhouse gas (GHG) emissions refer to a group of emissions that are generally believed to affect global climate conditions. The greenhouse effect compares the Earth and the atmosphere surrounding it to a greenhouse with glass panes. The glass panes in a greenhouse let heat from sunlight in and reduce the amount of heat that escapes. GHGs, such as carbon dioxide (CO<sub>2</sub>), methane (CH<sub>4</sub>), and nitrous oxide (N<sub>2</sub>O), keep the average surface temperature of the Earth close to 60 degrees Fahrenheit (°F). Without the greenhouse effect, the Earth would be a frozen globe with an average surface temperature of about 5°F.

In addition to  $CO_2$ ,  $CH_4$ , and  $N_2O$ , GHGs include hydrofluorocarbons, perfluorocarbons, sulfur hexafluoride, and water vapor. Of all the GHGs,  $CO_2$  is the most abundant pollutant that contributes to climate change through fossil fuel combustion.  $CO_2$  comprised 83.3 percent of the total GHG emissions in California in  $2002.^2$  The other GHGs are less abundant but have higher global warming potential than  $CO_2$ . To account for this higher potential, emissions of other GHGs are frequently expressed in the equivalent mass of  $CO_2$ , denoted as  $CO_2e$ . The  $CO_2e$  of  $CH_4$  and  $N_2O$  represented 6.4 and 6.8 percent, respectively, of the 2002 California GHG emissions. Other high global warming potential gases represented 3.5 percent of these emissions.<sup>3</sup> In addition, there are a number of human-made pollutants, such as  $CO_2$ , non-methane  $VOC_2$ , and  $SO_2$ , that have indirect effects on terrestrial or solar radiation absorption by influencing the formation or destruction of other climate change emissions.

### 3.2 REGULATORY SETTING

### **Federal**

**United States Environmental Protection Agency**. The Federal Clean Air Act (CAA) governs air quality in the United States. The United States Environmental Protection Agency (USEPA) is responsible for enforcing the CAA. USEPA is also responsible for establishing the National Ambient Air Quality Standards (NAAQS). NAAQS are required under the 1977 CAA and

<sup>&</sup>lt;sup>2</sup>California Environmental Protection Agency, *Climate Action Team Report to Governor Schwarzenegger* and the Legislature, March 2006, p. 11.

<sup>&</sup>lt;sup>3</sup>Ibid.

subsequent amendments. USEPA regulates emission sources that are under the exclusive authority of the federal government, such as aircraft, ships, and certain types of locomotives. USEPA has jurisdiction over emission sources outside State waters (e.g., beyond the outer continental shelf) and establishes various emission standards, including those for vehicles sold in States other than California. Automobiles sold in California must meet stricter emission standards established by CARB.

As required by the CAA, NAAQS have been established for seven major air pollutants: CO, NO<sub>2</sub>, O<sub>3</sub>, PM<sub>2.5</sub>, PM<sub>10</sub>, SO<sub>2</sub>, and Pb. The CAA requires USEPA to designate areas as attainment, nonattainment, or maintenance (previously nonattainment and currently attainment) for each criteria pollutant based on whether the NAAQS have been achieved. The federal standards are summarized in **Table 3-1**. The USEPA has classified the South Coast Air Basin (Basin) as maintenance for CO and nonattainment for O<sub>3</sub>, PM<sub>2.5</sub>, and PM<sub>10</sub>.

### State

California Air Resources Board. In addition to being subject to the requirements of CAA, air quality in California is also governed by more stringent regulations under the California Clean Air Act (CCAA). In California, the CCAA is administered by the California Air Resources Board (CARB) at the State level and by the air quality management districts and air pollution control districts at the regional and local levels. The CARB, which became part of the California Environmental Protection Agency in 1991, is responsible for meeting the State requirements of the CAA, administering the CCAA, and establishing the California Ambient Air Quality Standards (CAAQS). The CCAA, as amended in 1992, requires all air districts in the State to endeavor to achieve and maintain the CAAQS. CAAQS are generally more stringent than the corresponding federal standards and incorporate additional standards for sulfates, hydrogen sulfide, vinyl chloride, and visibility-reducing particles. CARB regulates mobile air pollution sources, such as motor vehicles. CARB is responsible for setting emission standards for vehicles sold in California and for other emission sources, such as consumer products and certain off-road equipment. CARB established passenger vehicle fuel specifications, which became effective in March 1996. CARB oversees the functions of local air pollution control districts and air quality management districts, which, in turn administer air quality activities at the regional and county levels. The State standards are summarized in Table 3-1.

The CCAA requires CARB to designate areas within California as either attainment or nonattainment for each criteria pollutant based on whether the CAAQS have been achieved. Under the CCAA, areas are designated as nonattainment for a pollutant if air quality data shows that a State standard for the pollutant was violated at least once during the previous three calendar years. Exceedances that are affected by highly irregular or infrequent events are not considered violations of a State standard and are not used as a basis for designating areas as nonattainment. Under the CCAA, the Los Angeles County portion of the Basin is designated as a nonattainment area for O<sub>3</sub>, PM<sub>2.5</sub>, and PM<sub>10</sub>.<sup>4</sup>

### Local

**South Coast Air Quality Management District**. The 1977 Lewis Air Quality Management Act created the South Coast Air Quality Management District (SCAQMD) to coordinate air quality planning efforts throughout Southern California. This Act merged four county air pollution control agencies into one regional district to better address the issue of improving air quality in Southern California. Under the Act, renamed the Lewis-Presley Air Quality Management Act in 1988, the SCAQMD is the agency principally responsible for comprehensive air pollution control in the region. Specifically, the SCAQMD is responsible for monitoring air quality, as well as

planning, implementing, and enforcing programs designed to attain and maintain State and federal ambient air quality standards in the district. Programs that were developed include air quality rules and regulations that regulate stationary sources, area sources, point sources, and certain mobile source emissions. The SCAQMD is also responsible for establishing stationary source permitting requirements and for ensuring that new, modified, or relocated stationary sources do not create net emission increases.

The SCAQMD monitors air quality within the project area. The SCAQMD has jurisdiction over an area of 10,743 square miles, consisting of Orange County; the non-desert portions of Los Angeles, Riverside, and San Bernardino counties; and the Riverside County portion of the Salton Sea Air Basin and Mojave Desert Air Basin. The Basin is a subregion of the SCAQMD and covers an area of 6,745 square miles. The Basin includes all of Orange County and the non-desert portions of Los Angeles, Riverside, and San Bernardino counties. The Basin is bounded by the Pacific Ocean to the west; the San Gabriel, San Bernardino and San Jacinto mountains to the north and east; and the San Diego County line to the south (**Figure 3-1**).

Air Quality Management Plan. All areas designated as nonattainment under the CCAA are required to prepare plans showing how the area would meet the State air quality standards by its attainment dates. The Air Quality Management Plan (AQMP) is the region's plan for improving air quality in the region. It addresses CAA and CCAA requirements and demonstrates attainment with State and federal ambient air quality standards. The AQMP is prepared by SCAQMD and the Southern California Association of Governments (SCAG). The AQMP provides policies and control measures that reduce emissions to attain both State and federal ambient air quality standards by their applicable deadlines. Environmental review of individual projects within the Basin must demonstrate that daily construction and operational emissions thresholds, as established by the SCAQMD, would not be exceeded. The environmental review must also demonstrate that individual projects would not increase the number or severity of existing air quality violations.

The 2007 AQMP was adopted by the SCAQMD on June 1, 2007. The 2007 AQMP proposes attainment demonstration of the federal  $PM_{2.5}$  standards through a more focused control of  $SO_X$ , directly-emitted  $PM_{2.5}$ , and  $NO_X$  supplemented with VOC by 2015. The eight-hour ozone control strategy builds upon the  $PM_{2.5}$  strategy, augmented with additional  $NO_X$  and VOC reductions to meet the standard by 2024. The 2007 AQMP also addresses several federal planning requirements and incorporates significant new scientific data, primarily in the form of updated emissions inventories, ambient measurements, new meteorological episodes, and new air quality modeling tools. The 2007 AQMP is consistent with and builds upon the approaches taken in the 2003 AQMP. However, the 2007 AQMP highlights the significant amount of reductions needed and the urgent need to identify additional strategies, especially in the area of mobile sources, to meet all federal criteria pollutant standards within the time frames allowed under the CAA.

taha 2009-034

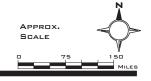

## LEGEND:

State of California

SOURCE: California Air Resources Board, State and Local Air Monitoring Network Plan, October 1998

**Toxic Air Contaminants**. The SCAQMD has a long and successful history of reducing air toxics and criteria emissions in the Basin. SCAQMD has an extensive control program, including traditional and innovative rules and policies. These policies can be viewed in the SCAQMD's *Air Toxics Control Plan for the Next Ten Years* (March 2000). To date, the most comprehensive study on air toxics in the Basin is the Multiple Air Toxics Exposure Study (MATES-III), conducted by the SCAQMD. The monitoring program measured more than 30 air pollutants, including both gases and particulates. The monitoring study was accompanied by a computer modeling study in which SCAQMD estimated the risk of cancer from breathing toxic air pollution throughout the region based on emissions and weather data. MATES-III found that the cancer risk in the region from carcinogenic air pollutants ranges from about 870 in a million to 1,400 in a million, with an average regional risk of about 1,200 in a million.

## **Global Climate Change**

In response to growing scientific and political concern with global climate change, California has recently adopted a series of laws to reduce emissions of GHGs into the atmosphere. In September 2002, Assembly Bill (AB) 1493 was enacted, requiring the development and adoption of regulations to achieve "the maximum feasible reduction of greenhouse gases" emitted by noncommercial passenger vehicles, light-duty trucks, and other vehicles used primarily for personal transportation in the State. California Governor Arnold Schwarzenegger announced, on June 1, 2005, through Executive Order S-3-05, the following GHG emission reduction targets: by 2010, reduce GHG emissions to 2000 levels; by 2020, reduce GHG emissions to 1990 levels; and by 2050, reduce GHG emissions to 80 percent below 1990 levels.

In response to the Executive Order, the Secretary of the California Environmental Protection Agency created the Climate Action Team (CAT), which, in March 2006, published the *Climate Action Team Report to Governor Schwarzenegger and the Legislature* (2006 CAT Report). The 2006 CAT Report identifies a recommended list of strategies that the State could pursue to reduce climate change GHG emissions. These are strategies that could be implemented by various State agencies to ensure that the Governor's targets are met and can be met with existing authority of the State agencies.

Assembly Bill 32. In September 2006, Governor Arnold Schwarzenegger signed the California Global Warming Solutions Act of 2006, also known as AB 32, into law. AB 32 focuses on reducing GHG emissions in California, and requires the CARB to adopt rules and regulations that would achieve greenhouse gas emissions equivalent to statewide levels in 1990 by 2020. To achieve this goal, AB 32 mandates that the CARB establish a quantified emissions cap, institute a schedule to meet the cap, implement regulations to reduce statewide GHG emissions from stationary sources, and develop tracking, reporting, and enforcement mechanisms to ensure that reductions are achieved. Because the intent of AB 32 is to limit 2020 emissions to the equivalent of 1990, and the present year (2009) is near the midpoint of this timeframe, it is expected that the regulations would affect many existing sources of GHG emissions and not just new general development projects. Senate Bill (SB) 1368, a companion bill to AB 32, requires the California Public Utilities Commission and the California Energy Commission to establish GHG emission performance standards for the generation of electricity. These standards will also apply to power that is generated outside of California and imported into the State.

AB 32 charges the CARB with the responsibility to monitor and regulate sources of GHG emissions in order to reduce those emissions. On June 1, 2007, the CARB adopted three discrete early action measures to reduce GHG emissions. These measures involved complying with a low carbon fuel standard, reducing refrigerant loss from motor vehicle air conditioning

maintenance, and increasing methane capture from landfills.<sup>5</sup> On October 25, 2007, the CARB tripled the set of previously approved early action measures. The approved measures include improving truck efficiency (i.e., reducing aerodynamic drag), electrifying port equipment, reducing perfluorocarbons from the semiconductor industry, reducing propellants in consumer products, promoting proper tire inflation in vehicles, and reducing sulfur hexaflouride emission from the non-electricity sector. The CARB has determined that the total statewide aggregated greenhouse gas 1990 emissions level and 2020 emissions limit is 427 million metric tons of  $CO_2e$ . The 2020 target reductions are currently estimated to be 174 million metric tons of  $CO_2e$ .

The CARB AB 32 Scoping Plan contains the main strategies to achieve the 2020 emissions cap. The Scoping Plan was developed by the CARB with input from the Climate Action Team and proposes a comprehensive set of actions designed to reduce overall carbon emissions in California, improve the environment, reduce oil dependency, diversify energy sources, and enhance public health while creating new jobs and improving the State economy. The GHG reduction strategies contained in the Scoping Plan include direct regulations, alternative compliance mechanisms, monetary and non-monetary incentives, voluntary actions, and market-based mechanisms such as a cap-and-trade system. The measures in the Scoping Plan adopted by the Board will be developed and put in place by 2012.

The CARB has also developed the greenhouse gas mandatory reporting regulation, which required reporting beginning on January 1, 2008 pursuant to requirements of AB 32. The regulations require reporting for certain types of facilities that make up the bulk of the stationary source emissions in California. The regulation language identifies major facilities as those that generate more than 25,000 metric tons of  $CO_2$  per year. Cement plants, oil refineries, electric generating facilities/providers, co-generation facilities, and hydrogen plants and other stationary combustion sources that emit more than 25,000 metric tons of  $CO_2$  per year, make up 94 percent of the point source  $CO_2$  emissions in California.

**CEQA Guideline Amendments**. As directed by Senate Bill 97, the Natural Resources Agency adopted amendments to the CEQA Guidelines for greenhouse gas emissions on December 30, 2009. The amendments became effective March 18, 2010. The CEQA Guideline amendments provide guidance to public agencies regarding the analysis and mitigation of the effects of GHG emissions in CEQA documents. Noteworthy revisions to the CEQA Guidelines include:

- Lead agencies should quantify all relevant GHG emissions and consider the full range of project features that may increase or decrease GHG emissions as compared to the existing setting;
- Consistency with the CARB Scoping Plan is not a sufficient basis to determine that a project's GHG emissions would not be cumulatively considerable;
- A lead agency may appropriately look to thresholds developed by other public agencies, including the CARB's recommended CEQA thresholds;
- To qualify as mitigation, specific measures from an existing plan must be identified and incorporated into the project. General compliance with a plan, by itself, is not mitigation;
- The effects of GHG emissions are cumulative and should be analyzed in the context of CEQA's requirements for cumulative impact analysis; and
- Given that impacts resulting from GHG emissions are cumulative, significant advantages may result from analyzing such impacts on a programmatic level. If analyzed properly,

<sup>&</sup>lt;sup>5</sup>California Air Resources Board, *Proposed Early Action Measures to Mitigate Climate Change in California*, April 20, 2007.

later projects may tier, incorporate by reference, or otherwise rely on the programmatic analysis.

Senate Bill 375. California Senate Bill (SB) 375, passed September 30, 2008, provides a means for achieving AB 32 goals through regulation of cars and light trucks. SB 375 aligns three critical policy areas of importance to local government: (1) regional long-range transportation plans and investments; (2) regional allocation of the obligation for cities and counties to zone for housing; and (3) a process to achieve greenhouse gas emissions reductions targets for the transportation sector. SB 375 establishes a process for CARB to develop the GHG emissions reductions targets for each region (as opposed to individual local governments or households). CARB must take certain factors into account before setting the targets, such as considering the likely reductions that will result from actions to improve the fuel efficiency of the Statewide fleet and regulations related to the carbon content of fuels (low carbon fuels). CARB must also convene a Regional Targets Advisory Committee, which includes representation from the League of California Cities, California State Association of Counties, metropolitan planning organizations, developers, planning organizations and other stakeholder groups. Furthermore, before setting the targets for each region, CARB is required to exchange technical information with the Metropolitan Planning Organizations (MPOs) for that region and with the affected air district. SB 375 provides that the MPOs may recommend a target for its region.

SB 375 relies upon regional planning processes already underway in the 17 MPOs in the State to accomplish its objectives. The provisions related to GHG emissions only apply to the MPOs in the State, which includes 37 of the 58 counties. Most notably, the measure requires the MPO to prepare a Sustainable Communities Strategy (SCS) within the Regional Transportation Plan (RTP), which sets forth a vision for growth for the region taking into account the transportation, housing, environmental, and economic needs of the region. The SCS is the blueprint by which the region will meet its GHG emissions reductions target if there is a feasible way to do so.

SB 375 indirectly addresses another long-standing issue: single purpose State agencies. The new law will require the cooperation of CARB, the California Transportation Commission (CTC), the California Department of Transportation (Caltrans) and the State Department of Housing and Community Development (HCD). For example, SB 375 takes a first step to counter this problem by connecting the Regional Housing Needs Allocation (RHNA) to the transportation planning process. While these State agencies will be involved in setting the targets and adopting new guidelines, local governments and the MPOs will not only provide input into setting the targets, but will serve as the lead on implementation. Member cities and counties working through their MPOs are tasked with development of the new integrated regional planning and transportation strategies designed to meet the GHG targets.

SB 375 also includes a provision that applies to all regional transportation planning agencies in the State that recognizes the rural contribution towards reducing GHGs. More specifically, the bill requires regional transportation agencies to consider financial incentives for cities and counties that have rural areas or farmland, for the purposes of, for example, transportation investments for the preservation and safety of the city street or county road system, farm to market, and interconnectivity transportation needs. An MPO or county transportation agency shall also consider financial assistance for counties to address countywide service responsibilities in counties that contribute towards the GHG emissions reductions targets by implementing policies for growth to occur within their cities.

SB 375 uses California Environmental Quality Act (CEQA) streamlining as an incentive to encourage residential projects, which help achieve AB 32 goals to reduce GHG emissions. Cities and counties that find the CEQA streamlining provisions attractive have the opportunity (but not the obligation) to align their planning decisions with the decisions of the region.

SB 375 provides more certainty for local governments and developers by framing how AB 32's reduction goal from transportation for cars and light trucks will be established. It should be noted, however, that SB 375 does not prevent CARB from adopting additional regulations under its AB 32 authority. However, based on the degree of consensus around SB 375 and early indications from CARB, such actions are not anticipated in the foreseeable future.<sup>6</sup>

**CARB Guidance**. The CARB has published draft guidance for setting interim GHG significance thresholds (October 24, 2008). The guidance is the first step toward developing the recommended Statewide interim thresholds of significance for GHG emissions that may be adopted by local agencies for their own use. The guidance does not attempt to address every type of project that may be subject to CEQA, but instead focuses on common project types that are responsible for substantial GHG emissions (i.e., industrial, residential, and commercial projects). The CARB believes that thresholds in these important sectors will advance climate objectives, streamline project review, and encourage consistency and uniformity in the CEQA analysis of GHG emissions throughout the State.

**SCAQMD Guidance**. The SCAQMD has convened a GHG CEQA Significance Threshold Working Group to provide guidance to local lead agencies on determining significance for GHG emissions in their CEQA documents. Members of the working group include government agencies implementing CEQA and representatives from various stakeholder groups that will provide input to the SCAQMD staff on developing GHG CEQA significance thresholds. On December 5, 2008, the SCAQMD Governing Board adopted the staff proposal for an interim GHG significance threshold for projects where the SCAQMD is lead agency. The SCAQMD has not adopted guidance for CEQA projects under other lead agencies.

**Green LA Action Plan**. The City of Los Angeles has issued guidance promoting green building to reduce GHG emissions. The goal of the Green LA Action Plan (Plan) is to reduce greenhouse gas emissions 35 percent below 1990 levels by 2030. The Plan identifies objectives and actions designed to make the City a leader in confronting global climate change. The measures would reduce emissions directly from municipal facilities and operations, and create a framework to address City-wide GHG emissions. The Plan lists various focus areas in which to implement GHG reduction strategies. Focus areas listed in the Plan include energy, water, transportation, land use, waste, port, airport, and ensuring that changes to the local climate are incorporated into planning and building decisions. The Plan discusses City goals for each focus area, as follows:

### Energy

- Increase the generation of renewable energy;
- Encourage the use of mass transit;
- Develop sustainable construction guidelines;

<sup>&</sup>lt;sup>6</sup>American Planning Association, California Chapter, *Analysis of SB* 375, <a href="http://www.calapa.org/en/cms/?2841">http://www.calapa.org/en/cms/?2841</a>, accessed October 27, 2009.

<sup>&</sup>lt;sup>7</sup>City of Los Angeles, Green LA: An Action Plan to Lead the Nation in Fighting Global Warming, May 2007.

- Increase City-wide energy efficiency; and
- Promote energy conservation.

#### Water

 Decrease per capita water use to reduce electricity demand associated with water pumping and treatment.

## Transportation

- Power the City vehicle fleet with alternative fuels; and
- Promote alternative transportation (e.g., mass transit and rideshare).

### Other Goals

- Create a more livable City through land use regulations;
- Increase recycling, reducing emissions generated by activity associated with the Port of Los Angeles and regional airports;
- Create more City parks, promoting the environmental economic sector; and
- Adapt planning and building policies to incorporate climate change policy.

The City adopted an ordinance to establish a green building program in April 2008. The ordinance establishes green building requirements for projects involving 50 or more dwelling units. The Green Building Program was established to reduce the use of natural resources, create healthier living environments and minimize the negative impacts of development on local, regional, and global ecosystems. The program addresses the following five areas:

- Site: location, site planning, landscaping, storm water management, construction and demolition recycling
- Water Efficiency: efficient fixtures, wastewater reuse, and efficient irrigation
- Energy and Atmosphere: energy efficiency, and clean/renewable energy
- Materials and Resources: materials reuse, efficient building systems, and use of recycled and rapidly renewable materials
- Indoor Environmental Quality: improved indoor air quality, increased natural lighting, and thermal comfort/control

## 3.3 EXISTING AIR QUALITY

### 3.3.1 Air Pollution Climatology

The project site is located within the Los Angeles County portion of the Basin. Ambient pollution concentrations recorded in Los Angeles County are among the highest in the four counties comprising the Basin.

The Basin is in an area of high air pollution potential due to its climate and topography. The general region lies in the semi-permanent high pressure zone of the eastern Pacific, resulting in a mild climate tempered by cool sea breezes with light average wind speeds. The Basin experiences warm summers, mild winters, infrequent rainfalls, light winds, and moderate humidity. This usually mild climatological pattern is interrupted infrequently by periods of extremely hot weather, winter storms, or Santa Ana winds. The Basin is a coastal plain with

connecting broad valleys and low hills, bounded by the Pacific Ocean to the west and high mountains around the rest of its perimeter. The mountains and hills within the area contribute to the variation of rainfall, temperature, and winds throughout the region.

The Basin experiences frequent temperature inversions. Temperature typically decreases with height. However, under inversion conditions, temperature increases as altitude increases, thereby preventing air close to the ground from mixing with the air above it. As a result, air pollutants are trapped near the ground. During the summer, air quality problems are created due to the interaction between the ocean surface and the lower layer of the atmosphere. This interaction creates a moist marine layer. An upper layer of warm air mass forms over the cool marine layer, preventing air pollutants from dispersing upward. Additionally, hydrocarbons and NO<sub>2</sub> react under strong sunlight, creating smog. Light, daytime winds, predominantly from the west, further aggravate the condition by driving air pollutants inland, toward the mountains. During the fall and winter, air quality problems are created due to CO and NO<sub>2</sub> emissions. CO concentrations are generally worse in the morning and late evening (around 10:00 p.m.). In the morning, CO levels are relatively high due to cold temperatures and the large number of cars traveling. High CO levels during the late evenings are a result of stagnant atmospheric conditions trapping CO in the area. Since CO emissions are produced almost entirely from automobiles, the highest CO concentrations in the Basin are associated with heavy traffic. NO<sub>2</sub> concentrations are also generally higher during fall and winter days.

### 3.3.2 Local Climate

The mountains and hills within the Basin contribute to the variation of rainfall, temperature, and winds throughout the region. Within the project site and its vicinity, the average wind speed, as recorded at the Downtown Los Angeles Wind Monitoring Station, is approximately five miles per hour. Wind in the vicinity of the project site predominately blows from the southwest.<sup>8</sup>

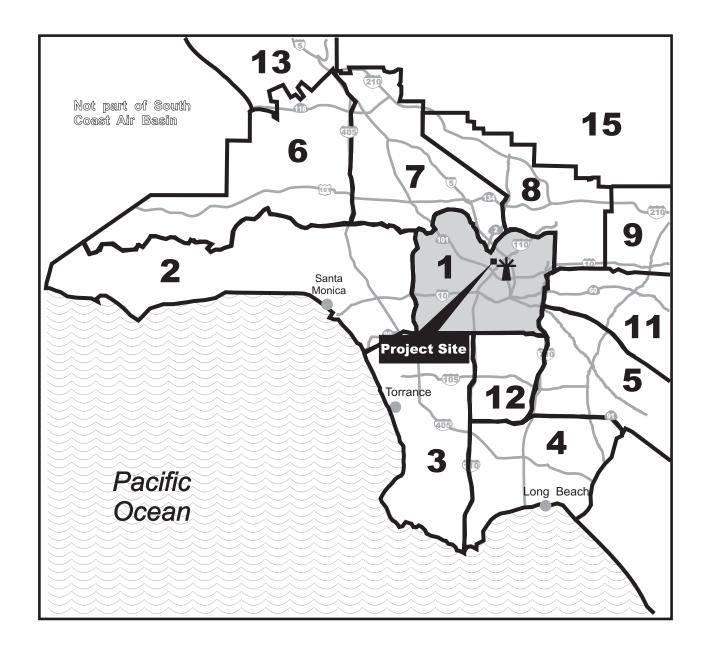

The annual average temperature in the project area is 64.9°F. The project area experiences an average winter temperature of approximately 58.0°F and an average summer temperature of approximately 71.5°F. Total precipitation in the project area averages approximately 15 inches annually. Precipitation occurs mostly during the winter and relatively infrequently during the summer. Precipitation averages approximately nine inches during the winter, approximately four inches during the spring, approximately two inches during the fall, and less than one inch during the summer.<sup>9</sup>

# 3.3.3 Air Monitoring Data

The SCAQMD monitors air quality conditions at 38 locations throughout the Basin. The Project Site is located in SCAQMD's Central Los Angeles County Air Monitoring Subregion, which is served by the Downtown Los Angeles Monitoring Station, is located approximately two miles east of the project site located at 1630 North Main Street in the City of Los Angeles (**Figure 3-2**). Historical data from the Downtown Los Angeles Monitoring Station were used to characterize existing conditions in the vicinity of the project area. Criteria pollutants monitored at the Downtown Los Angeles Monitoring Station include O<sub>3</sub>, CO, and NO<sub>2</sub>, SO<sub>2</sub> PM<sub>2.5</sub> and PM<sub>10</sub>.

Sulfur	Maximum 24-hr Concentration (ppm)	<0.01	<0.01	<0.01	<0.01	<0.01	<0.01
Dioxide	Days > 0.04 ppm (State 24-hr standard)	0	0	0	0	0	0

<sup>/</sup>a/ The Metropolitan General Forecast Area includes the Central Los Angeles County, South Central Los Angeles County, Southeast Los Angeles County, and North Orange County air monitoring areas of the SCAQMD. Data is no longer available from the Southeast Los Angeles County subrecion.

The CAAQS for the criteria pollutants are also shown in the table. As **Table 3-2** indicates, criteria pollutants CO,  $NO_2$ , and  $SO_2$  did not exceed the CAAQS during the 2006 to 2008 period. The one-hour State standard for  $O_3$  was exceeded three to eight times during this period, and the eight-hour State standard for  $O_3$  was exceeded four to seven times. The 24-hour State standard for  $PM_{10}$  was exceeded three to five times during this period. The annual State standard for  $PM_{2.5}$  was exceeded during the year 2006 to 2008 period. When compared to the Forecast area the Downtown Los Angeles Monitoring Station recorded concentrations of averages of the  $O_3$ ,  $NO_2$ ,  $SO_2$ ,  $PM_{2.5}$  and  $PM_{10}$  that were similar to the average concentrations of the Forecast Area's monitoring areas.

### 3.3.4 Sensitive Receptors

Some land uses are considered more sensitive to changes in air quality than others, depending on the population groups and the activities involved. CARB has identified the following typical groups who are most likely to be affected by air pollution: children under 14, the elderly over 65 years of age, athletes, and people with cardiovascular and chronic respiratory diseases. According to the SCAQMD, sensitive receptors include residences, schools, churches, playgrounds, child care centers, athletic facilities, long-term health care facilities, rehabilitation

<sup>/</sup>b/ An average of the maximum concentration of each criteria pollutant of the air monitoring areas of the Metropolitan General Forecast Area was used to represent maximum concentrations in the Metropolitan General Forecast Area.

SOURCE: SCAQMD, Historical Data by Year, available at http://www.aqmd.gov/smog/historicaldata.htm, accessed October 27, 2009.

centers, convalescent centers, and retirement homes. Churches are not listed by the SCAQMD as a sensitive receptor. However, they are considered to be sensitive to air pollution in this analysis because they typically function as a gathering location for adults and children.

As shown in **Figure 3-3**, sensitive receptors within one-quarter mile (1,320 feet) of the project site include the following:

- Single- and multi-family residences located approximately 70 feet west of the project site
- Single- and multi-family residences located approximately 70 feet east of the project site
- Single- and multi-family residences located approximately 70 feet north of the project site.
- Angelus Temple located approximately 70 feet north of the project site
- Saint Athanasius Episcopal Church located approximately 70 feet east of the project site
- Echo Park Recreation Center located approximately 95 feet south of the project site
- Echo Park Child Care Center located approximately 550 feet southeast of the project site

The above sensitive receptors represent the nearest sensitive receptors with the potential to be impacted by air emissions. Additional sensitive receptors are located in the surrounding community and may be impacted by air emissions.

### 3.4 METHODOLOGY AND SIGNIFICANCE CRITERIA

### 3.4.1 Methodology

This air quality analysis is consistent with the methods described in the SCAQMD *CEQA Air Quality Handbook* (1993 edition), as well as the updates to the *CEQA Air Quality Handbook*, as provided on the SCAQMD website.<sup>10</sup>

### **Construction Emissions**

Regional and localized construction emissions were analyzed to determine impacts. A worst-case scenario was developed based assumptions provided by the project design and engineering team. Construction emissions were calculated using calculation formulas published by the SCAQMD and USEPA. Heavy-duty truck and worker vehicle emission rates were obtained from the EMFAC2007 model. Equipment emission factors were obtained from the OFFROAD2007 model.

The localized construction analysis followed guidelines published by the SCAQMD in the Localized Significance Methodology for CEQA Evaluations (SCAQMD Localized Significance Threshold (LST) Guidance Document).<sup>11</sup> In January 2005, the SCAQMD supplemented the SCAQMD LST Guidance Document with Sample Construction Scenarios for Projects Less than Five Acres in Size.

<sup>&</sup>lt;sup>10</sup>SCAQMD, http://www.aqmd.gov/ceqa/hdbk.html, accessed November 25, 2009.

<sup>&</sup>lt;sup>11</sup>SCAQMD, Localized Significance Methodology, June 2003, revised July 2008.

- 5. Echo Park Child Care Center

SOURCE: TAHA, 2010

FIGURE 3-3

Assumptions used for the construction calculations are as follows:

### Construction

- Start Year: 2011
- Maximum Heavy-Duty Equipment to be operated in one day: 10 pieces
- Hours per day of heavy-duty equipment use: 10 hours
- Maximum acres of land disturbed in one day: 5 acres
- Maximum cubic yards of soil handled in one day: 6,000 cubic yards
- Maximum Haul Trucks per day: 85 trips per day

### **Health Risk Assessment**

A health risk assessment (HRA) was completed using emissions factors from EMFAC2007 and OFFROAD2007 for haul truck and on-site heavy equipment emissions, respectively. ISC-AERMOD dispersion modeling software was used to determine the concentrations of diesel particulate matter generated from haul truck trips and heavy equipment used in and around the project site.

The HRA was prepared based on emissions from haul trucks and diesel-powered construction equipment. The first step was to calculate the mass emissions from these sources. The proposed project would generate 8,858 truck trips during the construction phase. On-road truck emissions were calculated based on the haul route from the project site to US Highway 101 and emission rates from the EMFAC2007 model. It was assumed that each truck would idle on the project site for 15 minutes, and the idle emission rate was also obtained from the EMFAC2007 model. Equipment emissions were obtained from the OFFROAD model. It was assumed that ten pieces of equipment would operate on the project site.

The truck and equipment emission rates were input into the AERMOD dispersion model to obtain annual exposure concentrations. The model is a steady state Gaussian plume model for estimating ground level impacts from point, area, and volume sources in simple and complex terrain. The model offers additional flexibility by allowing the user to assign initial vertical and lateral dispersion parameters for stationary sources. Truck emissions were modeled based on SCAQMD Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis (August 2003). Idle emissions were treated as an area source with a five-meter release height. On-road emissions along the haul route were input as a line source with a release height of five meters.

Construction equipment emissions were modeled based on guidance from the SCAQMD Localized Significance Methodology. Equipment emissions were input as an area source with a release height of five meters. Based on SCAQMD guidance, a 50-meter receptor grid was used to obtain the maximum annual pollutant concentration and the receptor release height was set at 0.0 meters. AERMOD utilized surface meteorological and upper air data from the Downtown Los Angeles station.

## 3.4.2 Significance Criteria

The following are the significance criteria SCAQMD has established to determine project construction impacts. The proposed project would have a significant impact if:

- Daily regional and localized construction emissions were to exceed SCAQMD construction emissions thresholds for VOC, NO<sub>X</sub>, CO, SO<sub>X</sub>, PM<sub>2.5</sub>, or PM<sub>10</sub>, as presented in **Table 3-3**;
- Project-related construction traffic causes CO concentrations at study intersections to violate the CAAQS for either the one- or eight-hour period. The CAAQS for the one- and eight-hour periods are 20 ppm and 9.0 ppm, respectively;
- The proposed project would generate TAC emissions that generate a health risk that exceeds ten persons in one million; and/or
- The proposed project would create an odor nuisance.

Criteria Pollutant	Regional Emissions (Pounds Per Day) /a/	Localized Emissions (Pounds Per Day) /a/	
Volatile Organic Compounds (VOC)	75		
Nitrogen Oxides (NO <sub>X</sub> )	100	161	
Carbon Monoxide (CO)	550	1,861	
Sulfur Oxides (SO <sub>X</sub> )	150		
Fine Particulates (PM <sub>2.5</sub> )	55	8	
Particulates (PM <sub>10</sub> )	150	16	

### 3.5 ENVIRONMENTAL IMPACTS

#### 3.5.1 Construction Phase

## **Regional Impacts**

Construction of the proposed project has the potential to create air quality impacts through the use of heavy-duty construction equipment and through vehicle trips generated by construction workers traveling to and from the project site. Fugitive dust emissions would primarily result from site preparation (e.g., excavation) activities.  $NO_X$  emissions would primarily result from the use of construction equipment. The assessment of construction air quality impacts considers each of these potential sources. Construction emissions can vary substantially from day to day, depending on the level of activity, the specific type of operation and, for dust, the prevailing weather conditions.

It is mandatory for all construction projects in the Basin to comply with SCAQMD Rule 403 for Fugitive Dust. Specific Rule 403 control requirements include, but are not limited to, applying water in sufficient quantities to prevent the generation of visible dust plumes, applying soil binders to uncovered areas, reestablishing ground cover as quickly as possible, utilizing a wheel washing system to remove bulk material from tires and vehicle undercarriages before vehicles exit the project site, and maintaining effective cover over exposed areas. Compliance with Rule 403 would reduce  $PM_{2.5}$  and  $PM_{10}$  emissions associated with construction activities by approximately 61 percent.

**Table 3-4** shows the estimated daily emissions associated with each construction phase. Daily construction emissions would exceed the SCAQMD regional thresholds for  $NO_X$ , and regional construction emissions would result in a significant impact.

TABLE 3-4: ESTIMATED DAILY CONSTRUCTION EMISSIONS - UNMITIGATED							
	Pounds Per Day						
<b>Construction Phase</b>	VOC	NO <sub>X</sub>	СО	SO <sub>X</sub>	PM <sub>2.5</sub> /a/	PM <sub>10</sub> /a/	
Maximum Daily Construction Emissions	24	229	99	<1	25	87	
Regional Significance Threshold	75	100	550	150	55	150	
Exceed Threshold?	No	Yes	No	No	No	No	
Maximum Daily Construction Emissions	17	151	53	<1	22	84	
Localized Significance Threshold /b/		161	1,861	_	8	16	
Exceed Threshold?	No	No	No	No	Yes	Yes	

/a/ URBEMIS2007 emissions for fugitive dust were adjusted to account for a 61 percent control efficiency associated with SCAQMD Rule 403. /b/ SCAQMD has not developed localized significance methodology for VOC or SO<sub>x</sub>. **SOURCE**: TAHA, 2009 (Appendix D).

### **Localized Impacts**

Emissions for the localized construction air quality analysis of  $PM_{2.5}$ ,  $PM_{10}$ , CO, and  $NO_2$  were compiled using LST methodology required by the SCAQMD. Localized on-site emissions were calculated using similar methodology to the regional emission calculations. LSTs were developed based upon the size or total area of the emissions source, the ambient air quality in each source receptor area, and the distance to the sensitive receptor. LSTs for CO and  $NO_2$  were derived by using an air quality dispersion model to back-calculate the emissions per day that would cause or contribute to a violation of any ambient air quality standard for a particular source receptor area. Construction  $PM_{2.5}$  and  $PM_{10}$  LSTs were derived using a dispersion model to back-calculate the emissions necessary to exceed a concentration equivalent to 50  $\mu g/m^3$  over five hours, which is the SCAQMD Rule 403 control requirement.

**Table 3-4** shows the estimated daily localized emissions associated with construction activity. Daily construction emissions would exceed the SCAQMD localized significance thresholds for  $PM_{2.5}$  and  $PM_{10}$ . Localized construction emissions would result in a significant impact.

### **Construction CO Hotspot Analysis**

There is a direct relationship between traffic/circulation congestion and CO impacts since exhaust fumes from vehicular traffic are the primary source of CO. CO is a localized gas that dissipates very quickly under normal meteorological conditions. Therefore, CO concentrations decrease substantially as distance from the source (intersection) increases. The highest CO concentrations are typically found in areas directly adjacent to congested roadway intersections.

 $<sup>^{12}</sup>$ The concentrations of SO<sub>2</sub> are not estimated because construction activities would generate a small amount of SO<sub>X</sub> emissions. No State standard exists for VOC. As such, concentrations for VOC were not estimated.

The State one- and eight-hour CO standards may potentially be exceeded at congested intersections with high traffic volumes. An exceedance of the State CO standards at an intersection is referred to as a CO hotspot. The SCAQMD recommends a CO hotspot evaluation of potential localized CO impacts when V/C ratios are increased by two percent at intersections with a LOS of D or worse. SCAQMD also recommends a CO hotspot evaluation when an intersection decreases in LOS by one level beginning when LOS changes from C to D.

Baseline and Construction-related CO concentrations were modeled at three intersections near the project site. The study intersections were selected to be representative of the project area and were based on traffic volume to capacity (V/C) ratio and the traffic level of service (LOS) as indicated in the traffic analysis. 13,14

Based on the traffic study, the selected intersections are as follows:

- Glendale Boulevard/Bellevue Avenue AM Peak Hour
- Glendale Boulevard/Temple Avenue AM Peak Hour
- Glendale Boulevard/Temple Avenue PM Peak Hour

The USEPA CAL3QHC micro-scale dispersion model was used to calculate CO concentrations for 2013 "no project" and "project" conditions. CO concentrations at the analyzed intersection are shown for the AM and PM peak hours in **Table 3-5**. One-hour CO concentrations under "project" conditions would be approximately 3 ppm at worst-case sidewalk receptors. Eight-hour CO concentrations under "project" conditions would range from approximately 2.7 to 2.8 ppm. The State one- and eight-hour standards of 20 and 9.0 ppm, respectively, would not be exceeded at the analyzed intersections. Localized CO concentrations would result in a less-than-significant impact.

TABLE 3-5: 2009 AND 2013 CARBON MONOXIDE CONCENTRATIONS FOR CONSTRUCTION TRAFFIC /a/						
	1-hour (parts per million)			8-hour (parts per million)		
Intersection	Existing (2009)	No Project (2013)	Project (2013)	Existing (2009)	No Project (2013)	Project (2013)
Glendale Boulevard/Bellevue Avenue (AM)	4	3	3	3.4	2.8	2.8
Glendale Boulevard/Temple Avenue (AM)	4	3	3	3.4	2.7	2.7
Glendale Boulevard/Temple Avenue (PM)	4	3	3	3.4	2.7	2.7
State Standard	20			9.0		

/a/ Existing concentrations include year 2009 one- and eight-hour ambient concentrations of 3 and 2.6 ppm, respectively. No Project and Project concentrations include year 2013 one- and eight-hour ambient concentrations of 2 and 2 ppm, respectively.

<sup>&</sup>lt;sup>13</sup>Level of service is used to indicate the quality of traffic flow on roadway segments and at intersections. Level of service ranges from LOS A (free flow, little congestion) to LOS F (forced flow, extreme congestion).

<sup>&</sup>lt;sup>14</sup>Fehr & Peers, Transportation Consultants, *Traffic Study for the Echo Park Lake Rehabilitation Project*, January 2010.

# **Toxic Air Contaminant Impacts**

The greatest potential for TAC emissions during construction would be from diesel particulate emissions associated with heavy equipment operations and haul trucks during the import and export of materials to the project site. The haul truck route travels along Echo Park Avenue, Bellevue Avenue, Glendale Boulevard, Palo Alto Street, and along the US 101 Freeway, all which are segments adjacent or near to Echo Park Lake. According to SCAQMD methodology, health effects from carcinogenic air toxics are usually described in terms of individual cancer risk. "Individual Cancer Risk" is the likelihood that a person continuously exposed to concentrations of TACs over a 70-year lifetime will contract cancer based on the use of standard risk assessment methodology.

Carcinogenic compounds are not considered to have threshold levels (i.e., dose levels below which there are no risks). Any exposure, therefore, will have some associated risk. As a result, the State of California has established a threshold of one in one hundred thousand (1.0E-05) as a level posing no significant risk for exposures to carcinogens regulated under the Safe Drinking Water and Toxic Enforcement Act (Proposition 65).

Health risks associated with exposure to carcinogenic compounds can be defined in terms of the probability of developing cancer as a result of exposure to a chemical at a given concentration. Under a deterministic approach (i.e., point estimate methodology), the cancer risk probability is determined by multiplying the chemical's annual concentration by its unit risk factor (URF). The URF is a measure of the carcinogenic potential of a chemical when a dose is received through the inhalation pathway. It represents an upper bound estimate of the probability of contracting cancer as a result of continuous exposure to an ambient concentration of one microgram per cubic meter ( $\mu$ g/m³) over a 70-year lifetime.

The carcinogenic risk was calculated based on the SCAQMD Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis. According to this document, the cancer risks from diesel particulate matter associated with motor vehicles occur exclusively through the inhalation pathway. Therefore, the cancer risks can be estimated from the following equation:

 $CR_{DPM} = C_{DPM} \times URF_{DPM} \times LEA$ 

where,

CR<sub>DPM</sub> Cancer risks from diesel particulate matter; the probability of an individual

developing cancer as a result of exposure to diesel particulate matter.

C<sub>DPM</sub> Annual average diesel particulate matter concentration in µg/m3.

URF<sub>DPM</sub> Unit risk factor for diesel particulate matter; estimated probability that a person

will contract cancer as a result of inhalation of a diesel particulate matter

concentration of 1 µg/m3 continuously over a period of 70 years.

LEA Lifetime exposure adjustment.

The URF utilized in the assessment and corresponding cancer potency factors was obtained from California Office of Environmental Health Hazard Assessment (OEHHA) guidance. The LEA accounts for the fact that exposure would be less than 70 years. Based on information provided by the project design and engineering team, the exposure level was adjusted to account for 10 hours per day, 5 days per week, 48 weeks per year, and 2 years.

**Figure 3-4** is a contour map showing exposure concentrations to diesel particulate matter generated during construction activity. The maximum off-site annual concentration would be 0.85 micrograms per cubic meter. This results in a carcinogenic risk of 2.2 persons in one million, which is less than the ten persons in one million significance threshold. Construction-related diesel emissions would result in a less-than-significant impact.

# **Odor Impacts**

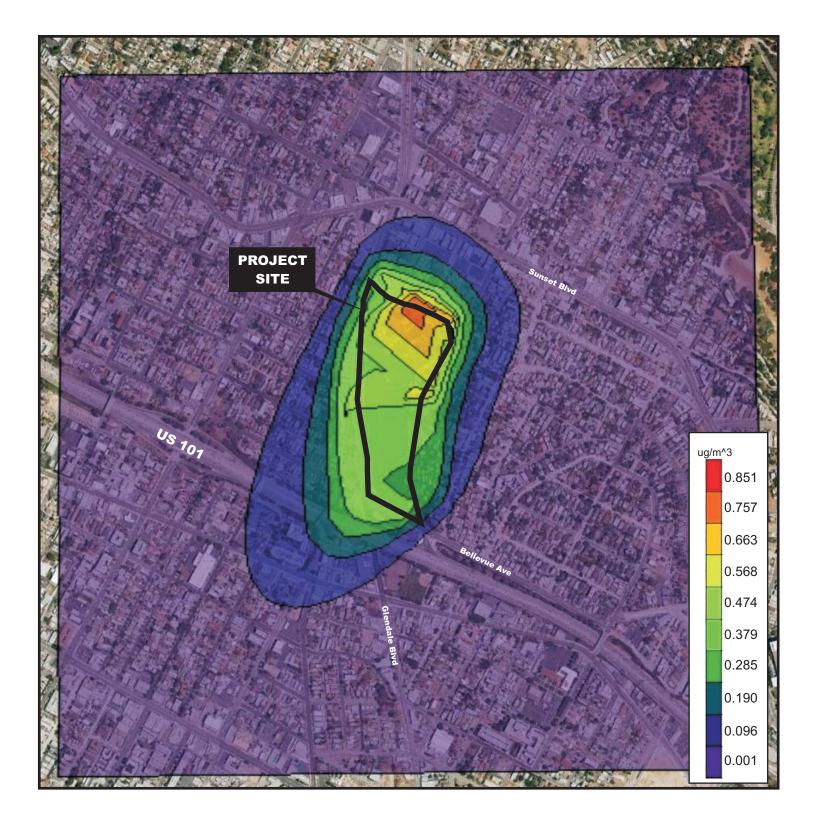

Potential sources that may emit odors during construction activities include equipment exhaust excavated organic matter from the lake bottom. Odors from equipment exhaust would be localized and generally confined to the immediate area surrounding the project site. The proposed project would utilize typical construction techniques, and the equipment odors would be typical of most construction sites and temporary in nature. Construction equipment would not cause an odor nuisance.

A Technical Memorandum on *Odor Control Management for Lake Excavation* was prepared to assess potential construction odor impacts associated with organic matter from the lake bottom. Geotechnical borings and sediment samples indicate that there is an accumulated layer of sediment in the Lake bottom that is approximately one foot thick and contains organic matter. Construction of the proposed project would involve the removal of sediment and other materials from the Lake bed. Once these materials are removed, they would be required to be piled in the staging areas established on the project site and dried for a period of approximately one to two months. During the drying activities, various odors may be emitted from the sediment piles due to decomposition of organic materials temporarily impacting the sensitive receptors in the project area. As such, construction odors would result in a significant impact without mitigation.

# **Construction Phase Mitigation Measures**

- AQ1 Water or a stabilizing agent shall be applied to exposed surfaces in sufficient quantity to prevent generation of dust plumes.
- AQ2 The construction contractor shall utilize at least one of the following measures at each vehicle egress from the project site to a paved public road:
  - Install a pad consisting of washed gravel maintained in clean condition to a depth of at least six inches and extending at least 30 feet wide and at least 50 feet long;
  - Pave the surface extending at least 100 feet and at least 20 feet wide:
  - Utilize a wheel shaker/wheel spreading device consisting of raised dividers at least 24 feet long and 10 feet wide to remove bulk material from tires and vehicle undercarriages; or
  - Install a wheel washing system to remove bulk material from tires and vehicle undercarriages.
- AQ3 All haul trucks hauling soil, sand, and other loose materials shall be covered (e.g., with tarps or other enclosures that would reduce fugitive dust emissions).

<sup>&</sup>lt;sup>15</sup>Black & Veatch Corporation, Echo Lake Park Rehabilitation Project Technical Memorandum on Odor Control Management for Lake Excavation, April 2010.

SOURCE: TAHA, 2010

- AQ4 Construction activity on unpaved surfaces shall be suspended when winds exceed 25 miles per hour.
- AQ5 Heavy-duty equipment operations shall be suspended during first and second stage smog alerts.
- **AQ6** Ground cover in disturbed areas shall be replaced as quickly as possible.
- AQ7 Contractors shall maintain equipment and vehicle engines in good condition and in proper tune per manufacturers' specifications.
- AQ8 Contractors shall utilize electricity from the electrical grid rather than temporary diesel or gasoline generators, as feasible.
- AQ9 Heavy-duty trucks shall be prohibited from idling in excess of five minutes, both on- and off-site.
- **AQ10** All diesel-powered construction equipment in use shall require control equipment that meets at a minimum Tier III emissions requirements. In the event Tier III equipment is not available, diesel powered construction equipment in use shall require emissions control equipment with a minimum of Tier II diesel standards.
- **AQ11** The construction contractor shall be required to develop an Odor Control Management Plan to meet the limits of 10 parts per billion hydrogen sulfide at the site perimeter. The Plan shall include the following elements:
  - A methodology for phased or staged operations to minimize the surface area of sediment exposed during lake draining and material removal and handling.
  - Monitoring and recording of hydrogen sulfide at the construction site perimeter to ensure compliance and implementation of the Plan.
  - Monitoring with a field olfactometer to establish threshold levels at which additional measures must be incorporated to limit total odors.
  - Utilization of lime stabilization (or similar technology) to speed the dewatering
    process for the sediment layer which contains organic material. Sufficient lime
    should be stockpiled to enable the contractor to raise the pH level to 12 to
    contain odors and suppress microbiological decay of the organic material to
    objectionable gas products. The quantity of lime will be dependent on the
    contractors stating plan and how much area is to be uncovered.
  - Procurement and local storage of an oxidizing chemical that can be applied in liquid form to treat stock piles of sediment or particularly odorous excavation areas.
- AQ12 The bid schedule shall include an allowance of \$50,000 to be used as directed by the City to mitigate odor issues during periods when the contractor is meeting the hydrogen sulfide standard but additional measures are needed because of complaints or olfactometer readings.
- **AQ13** The City shall establish a neighborhood odor monitoring group to monitor and record odor conditions from the community viewpoint.

# **Impacts After Mitigation**

Implementation of Mitigation Measures AQ1 through AQ6 would ensure that fugitive dust emissions would be reduced by approximately 61 percent. Consequently, daily  $PM_{2.5}$  and  $PM_{10}$  emissions would still be less than the SCAQMD threshold of 150 pounds per day. Implementation of Mitigation Measure AQ7 would reduce engine emissions by approximately five percent. Implementation of Mitigation Measures AQ8 through AQ10, while difficult to quantify, would also reduce construction emissions. Mitigated construction regional emissions would continue to exceed the SCAQMD regional threshold for  $NO_X$ . Regional construction emissions would result in an unavoidable, significant air quality impact.

Daily construction emissions would continue to exceed the SCAQMD localized significance thresholds for  $PM_{2.5}$  and  $PM_{10}$  emissions even after mitigation. Localized construction emissions would result in an unavoidable, significant air quality impact.

Implementation of Mitigation Measures **AQ11** and **AQ13** would help ensure that odors emitted during construction activity would be contained and dispersed through a comprehensive odor control plan. As a result, construction odors would result in a less-than-significant impact.

## 3.5.2 Operational Phase

The proposed project focuses on the rehabilitation of the lake liner and structure, and includes the addition of trees and modifications made to the landscaping. These are seen as beneficial improvements that would not generate additional emissions sources. No new uses would be seated at the project site, and no additional traffic is anticipated to be generated from the rehabilitation of the lake structure. Therefore, operation of the proposed project would not be substantially altered from existing operations. Operational impacts would result in a less-than-significant impact.

### **Operational Phase Mitigation Measures**

Operational air quality impacts would be less than significant, and no mitigation measures are required.

### **Impacts After Mitigation**

Not applicable. The project-related operational emissions would result in a less-than-significant impact without mitigation.

## 3.6 CUMULATIVE IMPACTS

### 3.6.1 SCAQMD Methodology

The related projects include the development of hundreds of thousands of square feet of commercial and residential uses, a number that is many times greater than the proposed project. As the proposed project results in a regionally significant impact during construction relative to  $NO_X$ , it is anticipated that related project development would also result in significant regional impacts. While SCAQMD required mitigation measures would reduce air quality impacts, the proposed project would contribute to a cumulatively significant regional  $NO_X$  impact.

## 3.6.2 Global Climate Change

Generally, an individual project cannot generate enough GHG emissions to influence global climate change because it is the increased accumulation of GHGs which may result in global climate change. However, an individual project may contribute an incremental amount of GHG emissions that could combine with other emission sources to create concentrations of GHG that could influence climate change. For most projects, the main contribution of GHG emissions is from motor vehicles, but how much of those emissions are "new" is uncertain. New projects do not create new drivers, and therefore, do not create a new mobile source of emissions. Rather, new projects only redistribute the existing traffic patterns. Larger projects will certainly affect a larger geographic area, but again, would not necessarily cause the creation of new drivers. Some mixed-use, urban infill, and mass transit projects could actually reduce the number of vehicle miles traveled.

Worldwide population growth and the consequent use of energy is the primary reason for GHG emission increases. The market demand for goods and services and the use of land is directly linked to population changes and economic development trends within large geographies (e.g., regional, national, worldwide). Individual site-specific projects have a negligible effect on these macro population-driven and growth demand factors. Whether an individual site-specific project is constructed or not has little effect on GHG emissions. This is because the demand for goods and services in question would be provided in some other location to satisfy the demands of a growing population if not provided on the project site. The only exception to this basic relationship between population growth, development, energy consumption and GHG emissions would occur if the site-specific project (1) embodied features that were not typical of urban environment or developing communities, and (2) generated a disproportionate amount of vehicle miles of travel or had other unique and disproportionately high fuel consumption characteristics. The proposed project does not fall within these exceptions.

Construction activity would generate approximately 7,022 tons of GHG emissions over the entire construction period. Operational GHG emissions are not anticipated to change, as there will be no additional sources of mobile and stationary GHG emissions. In addition, a goal of the rehabilitation project is to reduce water use at the project site through improvements to the lake's infrastructure. California's water infrastructure uses energy to collect, move, and treat water; dispose of wastewater; and power the large pumps that move water throughout the State. California consumers also use energy to heat, cool, and pressurize the water they use in their homes and businesses. Together these water-related energy uses annually account for roughly 20 percent of the State's electricity consumption, one-third of non-power plant natural gas consumption, and about 88 million gallons of diesel fuel consumption. The California Energy Commission has reported that the energy intensity of the water use cycle in Southern California is 12,700 kilowatt-hours per million gallons. Permanently reducing the amount of municipal water required to maintain the water level of the Lake would reduce long-term GHG emissions. For these reasons, the impact of the proposed project on the cumulative effect of global climate change is not cumulatively considerable and considered to be less than significant.

### 4.0 NOISE & VIBRATION

This section evaluates noise and vibration impacts associated with the implementation of the proposed project. The noise and vibration analysis in this section assesses: existing noise and vibration conditions at the project site and its vicinity, as well as short-term construction noise and vibration impacts associated with the proposed project. Mitigation measures for potentially significant impacts are recommended when appropriate to reduce noise and vibration levels.

## 4.1 NOISE AND VIBRATION CHARACTERISTICS AND EFFECTS

#### 4.1.1 Noise

### **Characteristics of Sound**

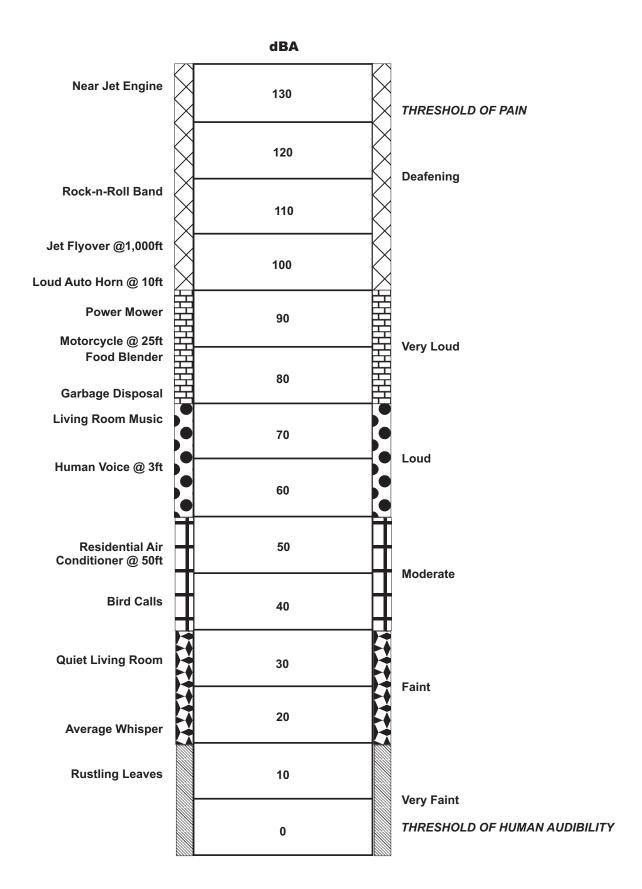

Sound is technically described in terms of the loudness (amplitude) and frequency (pitch) of the sound. The standard unit of measurement for sound is the decibel (dB). The human ear is not equally sensitive to sound at all frequencies. The "A-weighted scale," abbreviated dBA, reflects the normal hearing sensitivity range of the human ear. On this scale, the range of human hearing extends from approximately 3 to 140 dBA. **Figure 4-1** provides examples of A-weighted noise levels from common sounds.

### **Noise Definitions**

This noise analysis discusses sound levels in terms of Community Noise Equivalent Level (CNEL), Equivalent Noise Level ( $L_{eq}$ ).

**Community Noise Equivalent Level.** CNEL is an average sound level during a 24-hour period. CNEL is a noise measurement scale, which accounts for noise source, distance, single event duration, single event occurrence, frequency, and time of day. Human reaction to sound between 7:00 p.m. and 10:00 p.m. is as if the sound were actually 5 dBA higher than if it occurred from 7:00 a.m. to 7:00 p.m. From 10:00 p.m. to 7:00 a.m., humans perceive sound as if it were 10 dBA higher due to the lower background level. Hence, the CNEL is obtained by adding an additional 5 dBA to sound levels in the evening from 7:00 p.m. to 10:00 p.m. and 10 dBA to sound levels in the night from 10:00 p.m. to 7:00 a.m. Because CNEL accounts for human sensitivity to sound, the CNEL 24-hour figure is always a higher number than the actual 24-hour average.

**Equivalent Noise Level.**  $L_{eq}$  is the average noise level on an energy basis for any specific time period. The  $L_{eq}$  for one hour is the energy average noise level during the hour. The average noise level is based on the energy content (acoustic energy) of the sound.  $L_{eq}$  can be thought of as the level of a continuous noise which has the same energy content as the fluctuating noise level. The equivalent noise level is expressed in units of dBA.

SOURCE: TAHA, 2010

### **Effects of Noise**

Noise is generally defined as unwanted sound. The degree to which noise can impact the human environment range from levels that interfere with speech and sleep (annoyance and nuisance) to levels that cause adverse health effects (hearing loss and psychological effects). Human response to noise is subjective and can vary greatly from person to person. Factors that influence individual response include the intensity, frequency, and pattern of noise, the amount of background noise present before the intruding noise, and the nature of work or human activity that is exposed to the noise source.

## **Audible Noise Changes**

Studies have shown that the smallest perceptible change in sound level for a person with normal hearing sensitivity is approximately 3 dBA. A change of at least 5 dBA would be noticeable and would likely evoke a community reaction. A 10-dBA increase is subjectively heard as a doubling in loudness and would cause a community response.

Noise levels decrease as the distance from the noise source to the receiver increases. Noise generated by a stationary noise source, or "point source," will decrease by approximately 6 dBA over hard surfaces (e.g., reflective surfaces such as parking lots or smooth bodies of water) and 7.5 dBA over soft surfaces (e.g., absorptive surfaces such as soft dirt, grass, or scattered bushes and trees) for each doubling of the distance. For example, if a noise source produces a noise level of 89 dBA at a reference distance of 50 feet, then the noise level would be 83 dBA at a distance of 100 feet from the noise source, 77 dBA at a distance of 200 feet, and so on. Noise generated by a mobile source will decrease by approximately 3 dBA over hard surfaces and 4.5 dBA over soft surfaces for each doubling of the distance.

Generally, noise is most audible when traveling by direct line-of-sight. Barriers, such as walls, berms, or buildings, that break the line-of-sight between the source and the receiver greatly reduce noise levels from the source since sound can only reach the receiver by bending over the top of the barrier (diffraction). Sound barriers can reduce sound levels by up to 20 dBA. However, if a barrier is not high or long enough to break the line-of-sight from the source to the receiver, its effectiveness is greatly reduced.

### **Applicable Regulations**

The City of Los Angeles has established policies and regulations concerning the generation and control of noise that could adversely affect its citizens and noise sensitive land uses. Regarding construction, the Los Angeles Municipal Code (LAMC) indicates that no construction or repair work shall be performed between the hours of 9:00 p.m. and 7:00 a.m. the following day, since such activities would generate loud noises and disturb persons occupying sleeping quarters in any adjacent dwelling, hotel, apartment or other place of residence.<sup>17</sup> No person, other than an individual home owner engaged in the repair or construction of his/her single-family dwelling, shall perform any construction or repair work of any kind or perform such work within 500 feet of land so occupied before 8:00 a.m. or after 6:00 p.m. on any Saturday or on a federal holiday, or at any time on any Sunday. Under certain conditions, the City may grant a waiver to allow limited construction activities to occur outside of the limits described above.

<sup>&</sup>lt;sup>16</sup>Line-of-sight is an unobstructed visual path between the noise source and the noise receptor.

<sup>&</sup>lt;sup>17</sup>LAMC, Chapter IV, Article 1, Section 41.40, January 29, 1984 and Chapter XI, Article 2, Section 112.04, August 8, 1996.

The LAMC also specifies the maximum noise level of powered equipment or powered hand tools. Any powered equipment or hand tool that produces a maximum noise level exceeding 75 dBA at a distance of 50 feet is prohibited. However, this noise limitation does not apply where compliance is technically infeasible. Technically infeasible means the above noise limitation cannot be met despite the use of mufflers, shields, sound barriers and/or any other noise reduction device or techniques during the operation of equipment.

The City of Los Angeles has published significance thresholds to be used in noise analyses.<sup>19</sup> The significance thresholds, which are further discussed below, include thresholds for construction and operational noise levels.

### 4.1.2 Vibration

### **Characteristics of Vibration**

Vibration is an oscillatory motion through a solid medium in which the motion's amplitude can be described in terms of displacement, velocity, or acceleration. Vibration can be a serious concern, causing buildings to shake and rumbling sounds to be heard. In contrast to noise, vibration is not a common environmental problem. It is unusual for vibration from sources such as buses and trucks to be perceptible, even in locations close to major roads. Some common sources of vibration are trains, buses on rough roads, and construction activities, such as blasting, pile driving, and heavy earth-moving equipment.

### **Vibration Definitions**

There are several different methods that are used to quantify vibration. The peak particle velocity (PPV) is defined as the maximum instantaneous peak of the vibration signal. The PPV is most frequently used to describe vibration impacts to buildings and is usually measured in inches per second. The root mean square (RMS) amplitude is most frequently used to describe the effect of vibration on the human body. The RMS amplitude is defined as the average of the squared amplitude of the signal. Decibel notation (Vdb) is commonly used to measure RMS. The decibel notation acts to compress the range of numbers required to describe vibration.<sup>20</sup>

### **Effects of Vibration**

High levels of vibration may cause physical personal injury or damage to buildings. However, ground-borne vibration levels rarely affect human health. Instead, most people consider ground-borne vibration to be an annoyance that may affect concentration or disturb sleep. In addition, high levels of ground-borne vibration may damage fragile buildings or interfere with equipment that is highly sensitive to ground-borne vibration (e.g., electron microscopes). To counter the effects of ground-borne vibration, the Federal Transit Administration (FTA) has published guidance relative to vibration impacts. According to the FTA, fragile buildings can be exposed to ground-borne vibration levels of 0.3 inches per second without experiencing structural damage.<sup>21</sup>

<sup>&</sup>lt;sup>18</sup>LAMC, Chapter XI, Article 2, Section 112.05, August 8, 1996.

<sup>&</sup>lt;sup>19</sup>City of Los Angeles, L.A. CEQA Thresholds Guide, 2006.

<sup>&</sup>lt;sup>20</sup>Federal Transit Administration, *Transit Noise and Vibration Impact Assessment*, May 2006.

<sup>&</sup>lt;sup>21</sup>Federal Railway Administration, *High-Speed Ground Transportation Noise and Vibration Impact Assessment*, October 2005.

# **Perceptible Vibration Changes**

In contrast to noise, ground-borne vibration is not a phenomenon that most people experience every day. The background vibration velocity level in residential areas is usually 50 RMS or lower, well below the threshold of perception for humans which is around 65 RMS.<sup>22</sup> Most perceptible indoor vibration is caused by sources within buildings, such as operation of mechanical equipment, movement of people, or slamming of doors. Typical outdoor sources of perceptible ground-borne vibration are construction equipment, steel-wheeled trains, and traffic on rough roads. If the roadway is smooth, the vibration from traffic is rarely perceptible.

## **Applicable Regulations**

There are no adopted City standards for ground-borne vibration.

### 4.2 EXISTING ENVIRONMENTAL SETTING

## **4.2.1 Existing Noise Environment**

The existing noise environment of the project area is characterized by vehicular traffic and noises typical to a dense urban area (e.g., sirens, horns, helicopters, etc.). Vehicular traffic is the primary source of noise in the project vicinity.

Sound measurements were taken using a SoundPro DL Sound Level Meter between 10:30 a.m. and 12:30 p.m. on October 29, 2009 to determine existing ambient daytime noise levels in the project vicinity. These readings were used to establish existing ambient noise conditions and to provide a baseline for evaluating construction and operational noise impacts. Noise monitoring locations are shown in **Figure 4-2**. As shown in **Table 4-1**, existing ambient sound levels range between 64.8 and 73.0 dBA L<sub>eq</sub>.

TABLE 4-1: EXISTING NOISE LEVELS						
Key to Figure 4-2	Noise Monitoring Location	Distant from Project Site (feet)	Sound Level (dBA, L <sub>eq</sub> )

4	Saint Athanasius Episcopal Church	70	64.8			
SOURCE: TAHA, 2010.						

## 4.2.2 Existing Vibration Environment

There are not any stationary sources of vibration located near the project site. Heavy-duty trucks can generate ground-borne vibrations that vary depending on vehicle type, weight, and pavement conditions. Based on field observations, vibration levels from adjacent roadways are not typically perceptible at the project site.

<sup>&</sup>lt;sup>22</sup>Federal Transit Administration, *Transit Noise and Vibration Impact Assessment*, May 2006.

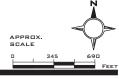

FIGURE 4-2

## 4.2.3 Sensitive Receptors

Noise- and vibration-sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals, guest lodging, libraries, and some passive recreation areas would each be considered noise- and vibration-sensitive and may warrant unique measures for protection from intruding noise. As shown in **Figure 3-3**, sensitive receptors near the project site include the following:

- Single- and multi-family residences located approximately 70 feet west of the project site
- Single- and multi-family residences located approximately 70 feet east of the project site
- Single- and multi-family residences located approximately 70 feet north of the project site
- Angelus Temple located approximately 70 feet north of the project site
- Saint Athanasius Episcopal Church located approximately 70 feet east of the project site
- Echo Park Recreation Center located approximately 95 feet south of the project site
- Echo Park Child Care Center located approximately 550 feet southeast of the project site

The above sensitive receptors represent the nearest sensitive receptors with the potential to be impacted by construction noise levels. Additional sensitive receptors are located in the surrounding community and may be impacted by the construction noise levels.

#### 4.3 METHODLOGY AND SIGNIFICANCE CRITERIA

## 4.3.1 Methodology

Construction noise levels are based on information obtained from the *L.A. CEQA Thresholds Guide*. The noise level during the construction period at each receptor location was calculated by (1) making a distance adjustment to the construction source sound level and (2) logarithmically adding the adjusted construction noise source level to the ambient noise level. Vibration levels were estimated based on information provided by the FTA.<sup>24</sup>

### 4.3.2 Significance Criteria

### Construction Phase Significance Criteria

Based on the City of Los Angeles *L.A. CEQA Threshold Guide*, the proposed project would result in significant construction noise impacts if:

- Construction activities lasting more than one day would exceed existing ambient noise levels by 10 dBA or more at a noise sensitive use;
- Construction activities lasting more than ten days in a three-month period would exceed existing ambient noise levels by 5 dBA or more at a noise sensitive use;
- Construction activities would exceed the ambient noise level by 5 dBA at a noise sensitive use between the hours of 9:00 p.m. and 7:00 a.m. Monday through Friday, before 8:00 a.m. or after 6:00 p.m. on Saturday, or anytime on Sunday; and/or

<sup>&</sup>lt;sup>23</sup>City of Los Angeles, L.A. CEQA Thresholds Guide, 2006.

<sup>&</sup>lt;sup>24</sup>Federal Transit Authority, *Transit Noise and Vibration Impact Assessment*, May 2006.

• The proposed project generates a mobile noise level increase that causes the ambient noise level measured at the property line of the affected uses to increase by 3 decibels L<sub>eq</sub> to or within the "normally unacceptable" or "clearly unacceptable" categories, as show in **Table 4-2**, or any 5-dBA or more increase in noise level.

## 4.3.3 Ground-borne Vibration Significance Criteria

There are no adopted State or City of Los Angeles ground-borne vibration standards. Based on federal guidelines, the proposed project would result in a significant construction vibration impact if:

 The proposed project would expose buildings to the FTA building damage threshold level of 0.3 inches per second.

### 4.4 ENVIRONMENTAL IMPACTS

## 4.4.1 Noise Impacts

## **Construction Phase Noise Impacts**

Construction of the proposed project would result in temporary increases in ambient noise levels in the project area on an intermittent basis. The increase in noise would occur during the approximate 26-month construction schedule. Noise levels would fluctuate depending on the construction phase, equipment type and duration of use, distance between the noise source and receptor, and presence or absence of noise attenuation barriers.

Construction activities typically require the use of numerous noise-generating equipment. Typical noise levels from various types of equipment that may be used during construction are listed in **Table 4-3**. The table shows noise levels at distances of 50 and 100 feet from the construction noise source.

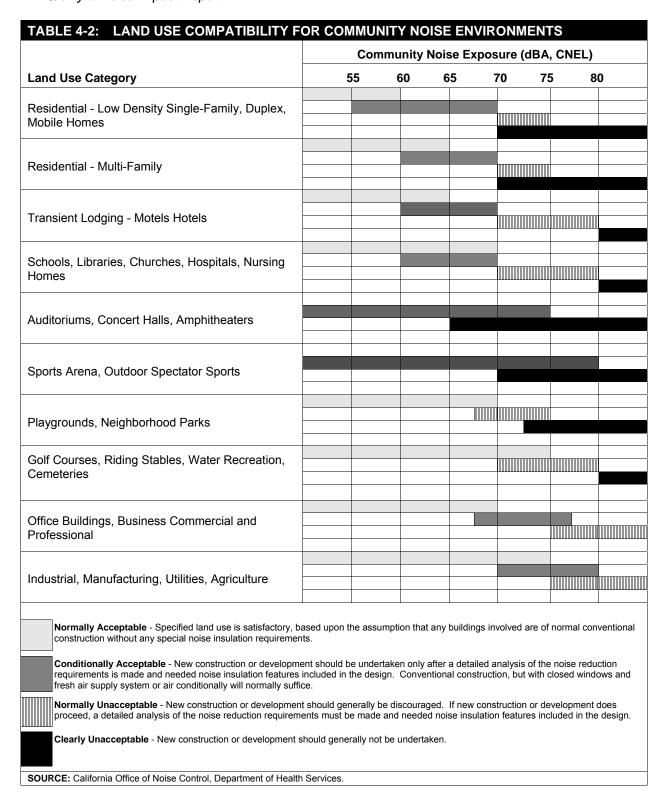

TABLE 4-3: MAXIMUM NOIS	E LEVELS OF COMMON CONSTR	UCTION MACHINES
	Noise Le	vel (dBA)
Noise Source	50 Feet /a/	100 Feet /a/
Front Loader	80	74
Trucks	89	83
Cranes (derrick)	88	82
Jackhammers	90	84
Generators	77	71
Back Hoe	84	78
Tractor	88	82
Scraper/Grader	87	81
Paver	87	81
Impact Pile Driving	101	95
Auger Drilling	77	71

/a/ Assumes a 6-dBA drop-off rate for noise generated by a "point source" and traveling over hard surfaces. Actual measured noise levels of the equipment listed in this table were taken at distances of ten and 30 feet from the noise source.

SOURCE: City of Los Angeles, L.A. CEQA Thresholds Guide, 2006.

The noise levels shown in **Table 4-4** take into account the likelihood that more than one piece of construction equipment would be in operation at the same time and lists the typical overall noise levels that would be expected for each phase of construction. The highest noise levels are expected to occur during the grading/excavation and finishing phases of construction. A typical piece of noisy equipment is assumed to be active for 40 percent of the eight-hour workday (consistent with the USEPA studies of construction noise), generating a noise level of 89 dBA L<sub>eq</sub> at a reference distance of 50 feet.

TABLE 4-4: OUTDOOR CONSTRUCTION NOISE	LEVELS
Construction Phase	Noise Level At 50 Feet (dBA)
Ground Clearing	84

### **On-Site Construction Noise**

**Table 4-5** presents the estimated noise levels at sensitive receptors during construction activity. Noise level increases would range from approximately 1.7 to 21.3 dBA,  $L_{\rm eq}$ . The highest construction-related noise increase would occur at a single-family residence at east of the project site. Noise levels would exceed the 5-dBA significance threshold. Construction activity would result in a significant noise impact without mitigation.

TABLE 4-5: CONSTRUCTION NOIS	SE IMPACT	- UNMITIGATI	ED		
Sensitive Receptor	Distance (feet) /a/	Maximum Construction Noise Level (dBA) /b/	Existing Ambient (dBA, L <sub>eq</sub> ) /c/	New Ambient (dBA, L <sub>eq</sub> ) /d/	Increase
Single- and Multi-family residences east of the project site	70	86.1	64.8	86.1	21.3
Single- and Multi-family residences west of the project site	70	86.1	73.0	86.3	13.3
Single- and Multi-family residences north of the project site	70	86.1	69.7	86.2	16.5
Angelus Temple	70	86.1	69.7	86.2	16.5
Saint Athanasius Episcopal Church	70	86.1	64.8	86.1	21.3
Echo Park Recreation Center	95	78.4	66.4	78.7	12.3

<sup>/</sup>a/ Distance of noise source from receptor.

SOURCE: TAHA, 2010.

### **Off-Site Construction Mobile Noise**

Construction activity would include a substantial number of haul trucks. It was assumed that up to 85 delivery/haul trucks and 40 construction worker vehicles would be traveling to and from the project site daily. For a 10-hour construction workday, it is assumed that approximately up to 14 delivery/haul trucks per hour would be traveling on the proposed haul route.

The haul truck route travels along Glendale Boulevard, Echo Park Avenue, Park Avenue, and Bellevue Avenue, all which are segments adjacent to the Echo Park Lake. The baseline (2013) mobile noise level along these segments ranges from 60.2 to 71.4 dBA  $L_{\rm eq}$ . A haul truck noise analysis was completed using the FHWA RD-77-108 noise calculation formulas. **Table 4-6** shows that construction-related truck and worker vehicle travel would increase noise levels up to 3.4 dBA at Park Avenue between Glendale Boulevard and Echo Park Avenue. The new mobile noise level would be approximately 63.6 dBA  $L_{\rm eq}$ , which, in accordance with **Table 4-2**, is still an acceptable noise level for residences and churches. Construction-related mobile noise levels would not increase ambient noise levels measured at the property line of nearby sensitive receptors to increase by 3 decibels  $L_{\rm eq}$  to or within the "normally unacceptable" or "clearly unacceptable" categories. Construction-related truck and worker vehicle travel would result in a less-than-significant noise impact.

<sup>/</sup>b/ Construction noise source's sound level at receptor location with distance and building adjustment.

<sup>/</sup>c/ Pre-construction activity ambient sound level at receptor location.

<sup>/</sup>d/ New sound level at receptor location during the construction period, including noise from construction activity.

<sup>/</sup>e/ An incremental noise level increase of 5 dBA or more would result in a significant impact.

<sup>&</sup>lt;sup>25</sup>Assumes 40 construction workers per day with an average vehicle ridership of 1.

TABLE 4-6: OFF-SITE PROJE	CTCONSTRUCTIO	ON MOBILI	E NOISE IN	Estimated dBA,	L <sub>eq</sub>
Roadway Segment	Nearest Sensitive Receptor	Distance (feet)	Baseline (2013)	Project Construction	Construction Impact
Glendale Boulevard between Park and Bellevue Avenues	Single-Family Residences	30	71.4	71.8	0.4
Echo Park Avenue between Reservoir Street and Bellevue Avenue	Single- and Multi- Family Residences, St. Athanasius Episcopal Church	30	65.8	67.4	1.6
Park Avenue between Glendale Boulevard and Echo Park Avenue	Single- and Multi- Family Residences, Angelus Temple	40	60.2	63.6	3.4

# Construction Phase Noise Mitigation Measures

- **N1** All construction equipment shall be equipped with residential-grade mufflers and other suitable noise attenuation devices.
- **N2** Grading and construction contractors shall use quieter equipment as opposed to noisier equipment (such as rubber-tired equipment rather than metal-tracked equipment).
- N3 All residential units located within 500 feet of the construction site shall be sent a notice regarding the construction schedule of the proposed project. A sign, legible at a distance of 50 feet shall also be posted at the construction site. All notices and the signs shall indicate the dates and duration of construction activities, as well as provide a telephone number where residents can inquire about the construction process and register complaints.
- A "noise disturbance coordinator" shall be established. The disturbance coordinator shall be responsible for responding to any local complaints about construction noise. The disturbance coordinator shall determine the cause of the noise complaint (e.g., starting too early, bad muffler, etc.) and shall be required to implement reasonable measures such that the complaint is resolved. All notices that are sent to residential units within 500 feet of the construction site and all signs posted at the construction site shall list the telephone number for the disturbance coordinator.

# Impacts After Mitigation

Mitigation Measure **N1** would reduce noise levels by approximately 15 dBA. Mitigation Measures **N2** through **N4** would assist in attenuating construction noise levels. **Table 4-7** shows mitigated construction noise levels. Mitigated construction noise levels would still exceed the 5-dBA significance threshold at multiple sensitive receptors. Construction activity would result in a significant and unavoidable impact.

TABLE 4-7: CONSTRUCTION NOIS	SE IMPACT	- MITIGATED			
Sensitive Receptor	Distance (feet) /a/	Maximum Construction Noise Level (dBA) /b/	Existing Ambient (dBA, L <sub>eq</sub> ) /c/	New Ambient (dBA, L <sub>eq</sub> ) /d/	Increase
Single- and Multi-family residences east of the project site	70	71.1	64.8	72.0	7.2
Single- and Multi-family residences west of the project site	70	71.1	73.0	75.2	2.2

<sup>/</sup>a/ Distance of noise source from receptor.

SOURCE: TAHA, 2010.

# **Operational Phase Noise Impacts**

The proposed project will make renovations to the existing lake, and will not develop any additional noise-generating land uses. In addition, operation of the proposed project is not anticipated to generate any additional vehicle trips. After rehabilitation activities are completed, Echo Lake Park will operate in a similar capacity as the existing facilities. It is not anticipated that operational noise would increase after the lake has reopened to the public, as no trips would be generated as a result of these renovations. Operational noise levels would result in a less-than-significant noise impact.

### **Operational Phase Noise Mitigation Measures**

Operational noise impacts would be less than significant, and no mitigation measures are required.

# **Impacts After Mitigation**

Not applicable. The project-related operational noise would result in a less-than-significant impact without mitigation.

# 4.4.2 Ground-borne Vibration Impacts

### **Construction Phase Ground-borne Vibration Impacts**

As shown in **Table 4-8**, use of heavy equipment (e.g., a large bulldozer) generates vibration levels of 0.089 inches per second at a distance of 25 feet. The nearest residential structures to the project site would be approximately 70 feet from occasional heavy equipment activity and could experience vibration levels of 0.019 inches per second. Vibration levels at these receptors would not exceed the potential building damage threshold of 0.3 inches per second.

<sup>/</sup>b/ Construction noise source's sound level at receptor location, with distance and building adjustment.

<sup>/</sup>c/ Pre-construction activity ambient sound level at receptor location.

<sup>/</sup>d/ New sound level at receptor location during the construction period, including noise from construction activity.

<sup>/</sup>e/ An incremental noise level increase of 5 dBA or more would result in a significant impact.

TABLE 4-8: VIBRATION VELOCITIES FOR CONSTRUCTION E	QUIPMENT
Equipment	PPV at 25 feet (Inches /Second) /a/
Large Bulldozer	0.089
Loaded Trucks	0.076
/a/ Fragile buildings can be exposed to ground-borne vibration levels of 0.5 inches per second w SOURCE: Federal Transit Authority, <i>Transit Noise and Vibration Impact Assessment</i> , May 2006	, ,

# **Construction Phase Ground-borne Vibration Mitigation Measures**

Construction phase ground-borne vibration impacts would be less than significant, and no mitigation measures are required.

# **Impacts After Mitigation**

Not applicable. Construction phase ground-borne vibration impacts would result in a less-than-significant impact without mitigation.

# **Operational Phase Ground-borne Vibration Impacts**

The proposed project would not include significant stationary sources of ground-borne vibration, such as heavy equipment operations. In addition, operation of the proposed project is not anticipated to generate any additional vehicle trips, and therefore no new sources of mobile vibration. Thus, operational vibration would result in a less-than-significant impact.

# **Operational Phase Ground-borne Vibration Mitigation Measures**

Operational ground-borne vibration impacts would be less than significant, and no mitigation measures are required.

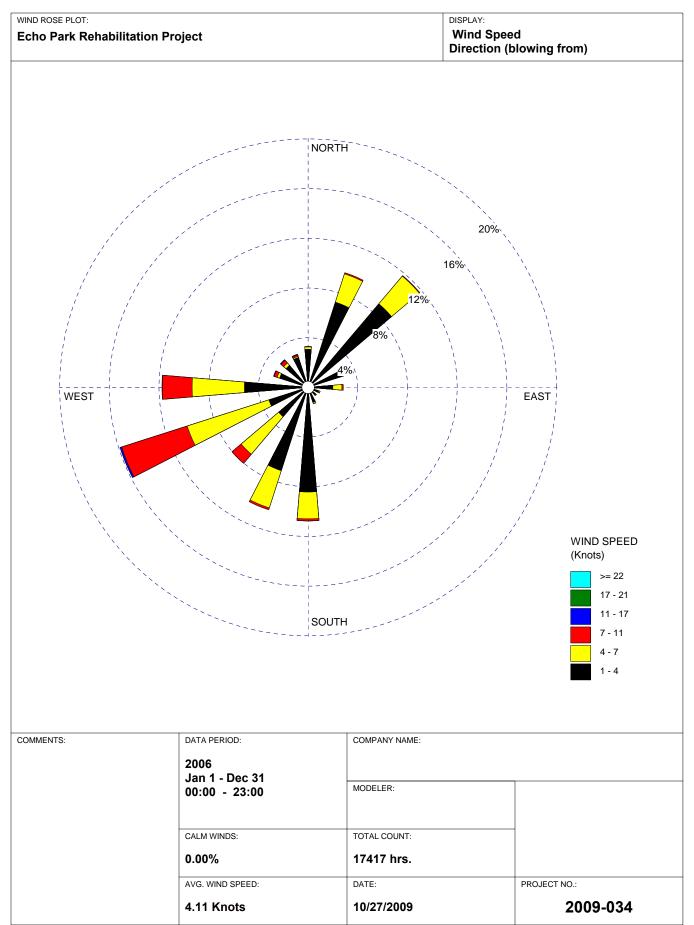

# **Impacts After Mitigation**

The project-related operational ground-borne vibration would result in a less-than-significant impact.

# 4.5 **CUMULATIVE IMPACTS**

The related project closest to the project site is Los Angeles Unified School District Central Region Elementary School #14 located approximately 1,000 feet west of the project site. Residences between the school and the project site would potentially be exposed to cumulative construction noise. The cumulative noise level at one of these residences would be less than 60 dBA when accounting for distance and building attenuation. The ambient noise level in this neighborhood is approximately 65 dBA  $L_{\rm eq}$ . Construction noise would not increase ambient noise levels by more than 5 dBA, and the proposed project would not contribute to a cumulatively considerable impact.

ppm - Parts Per Million parts of air, by volume.

AAM = Annual Arithmetic Mean

-- - Pollutant not monitored.

\* Less than 12 full months of data. May not be representative.

\*\* Salton Sea Air Basin.

The map showing the locations of source/receptor areas can be accessed via the Internet at <a href="http://www.aqmd.gov/telemweb/areamap.aspx">http://www.aqmd.gov/telemweb/areamap.aspx</a>. Locations of source/receptor areas are shown on the "South Coast Air Quality Management District Air Monitoring Areas" map available free of charge from SCAQMD Public Information.

a) - The federal 8-hour standard (8-hour average CO > 9 ppm) and state 8-hour standard (8-hour average CO > 9.0 ppm) were not exceeded. The federal and state 1-hour standards (35 ppm and 20 ppm) were not exceeded, either.

b) - The federal 1-hour ozone standard was revoked and replaced by the 8-hour average ozone standard effective June 15, 2005. The 8-hour average California ozone standard of 0.07 ppm was established effective May 17, 2006.

c) - The state standard is 1-hour average NO<sub>2</sub> > 0.25 ppm. The federal standard is annual arithmetic mean NO<sub>2</sub> > 0.0534 ppm. Air Resources Board has approved to lower the NO<sub>2</sub> 1-hour standard to 0.18 ppm and establish a new annual standard of 0.030 ppm. The revisions are expected to become effective later in 2007.

d) - The state standards are 1-hour average  $SO_2 > 0.25$  ppm and 24-hour average  $SO_2 > 0.04$  ppm. The federal standards are annual arithmetic mean  $SO_2 > 0.03$  ppm, 24-hour average > 0.14 ppm, and 3-hour average > 0.50 ppm. The federal and state  $SO_2$  standards were not exceeded.

μg/m<sup>3</sup> - Micrograms per cubic meter of air

AAM - Annual Arithmetic Mean

-- - Pollutant not monitored

\* Less than 12 full months of data. May not be representative.

\*\* Salton Sea Air Basin. e) - PM10 samples were collected every 6 days at all sites except for Station Numbers 4144 and 4157 where samples were collected every 3 days.

f) - PM2.5 samples were collected every 3 days at all sites except for the following sites: Station Numbers 060, 072, 077, 087, 3176, and 4144 where samples were taken every day, and Station Number 5818 where samples were taken every 6 days.

- g) Total suspended particulates, lead, and sulfate were determined from samples collected every 6 days by the high volume sampler method, on glass fiber filter media.
- h) Federal annual PM10 standard (AAM > 50 μg/m³) was revoked effective December 17, 2006. State standard is annual average (AAM) > 20 μg/m³.
- i) U.S. EPA has revised the federal 24-hour PM2.5 standard from 65 µg/m³ to 35 µg/m³; effective December 17, 2006.
- j) Federal PM2.5 standard is annual average (AAM) >  $15 \mu g/m^3$ . State standard is annual average (AAM) >  $12 \mu g/m^3$ .
- k) Federal lead standard is quarterly average >  $1.5 \,\mu\text{g/m}^3$ ; and state standard is monthly average  $\geq 1.5 \,\mu\text{g/m}^3$ . No location exceeded lead standards. Maximum monthly and quarterly lead concentrations at special monitoring sites immediately downwind of stationary lead sources were 0.24 µg/m<sup>3</sup> and 0.22 µg/m<sup>3</sup>, respectively, both recorded at Central Los Angeles.
- + The data for the samples collected on a high-wind day (July 16, 2006) at Palm Springs and Indio (226 µg/m<sup>3</sup> and 313 µg/m<sup>3</sup>, respectively) were excluded in accordance with EPA's Natural Events Policy.

The map showing the locations of source/receptor areas can be accessed via the Internet at <a href="http://www.aqmd.gov/telemweb/areamap.aspx">http://www.aqmd.gov/telemweb/areamap.aspx</a>. Locations of source/receptor areas are shown on the "South Coast Air Quality Management District Air Monitoring Areas" map available free of charge from SCAQMD Public Information.

<sup>\*</sup> Less than 12 full months of data; may not be representative.

a) - The federal 8-hour standard (8-hour average CO > 9 ppm) and state 8-hour standard (8-hour average CO > 9.0 ppm) were not exceeded. The federal and state 1-hour standards (35 ppm and 20 ppm) were not exceeded, either.

b) - The federal 1-hour ozone standard was revoked and replaced by the 8-hour ozone standard effective June 15, 2005. U.S. EPA has revised the federal 8-hour ozone standard from 0.084 ppm to 0.075 ppm, effective May 27, 2008.

c) - The 8-hour average California ozone standard of 0.070 ppm was established effective May 17, 2006.

d) - The federal standard is annual arithmetic mean NO<sub>2</sub> > 0.0534 ppm. California Air Resources Board has revised the NO<sub>2</sub> 1-hour state standard from 0.25 ppm to 0.18 ppm and has established a new annual standard of 0.030 ppm, effective March 20, 2008.

e) - The state standards are 1-hour average  $SO_2 > 0.25$  ppm and 24-hour average  $SO_2 > 0.04$  ppm. The federal standards are annual arithmetic mean  $SO_2 > 0.03$  ppm, 24-hour average > 0.14 ppm, and 3-hour average > 0.50 ppm. The federal and state  $SO_2$  standards were not exceeded.

μg/m<sup>3</sup> - Micrograms per cubic meter of air.

AAM = Annual Arithmetic Mean

-- - Pollutant not monitored.

f) - PM10 samples were collected every 6 days at all sites except for Station Numbers 4144 and 4157 where samples were collected every 3 days.

Printed on Recycled Paper

<sup>\*</sup> Less than 12 full months of data; may not be representative.

<sup>\*\*</sup> Salton Sea Air Basin.

g) - PM2.5 samples were collected every 3 days at all sites except for the following sites: Station Numbers 060, 072, 077, 087, 3176, and 4144 where samples were taken every day, and Station Number 5818 where samples were taken every 6 days.

h) - Total suspended particulates, lead, and sulfate were determined from samples collected every 6 days by the high volume sampler method, on glass fiber filter media.

i) - Federal annual PM10 standard (AAM > 50 μg/m³) was revoked effective December 17, 2006. State standard is annual average (AAM) > 20 μg/m³.

j) - U.S. EPA has revised the federal 24-hour PM2.5 standard from 65 µg/m<sup>3</sup> to 35 µg/m<sup>3</sup>; effective December 17, 2006.

k) - Federal PM2.5 standard is annual average (AAM) > 15  $\mu$ g/m<sup>3</sup>. State standard is annual average (AAM) > 12  $\mu$ g/m<sup>3</sup>.

Federal lead standard is quarterly average > 1.5 μg/m<sup>3</sup>; and state standard is monthly average ≥ 1.5 μg/m<sup>3</sup>. Lead and sulfate data analysis is incomplete and data is not available at this time.

<sup>+ -</sup> The following PM10 data samples were excluded from compliance consideration in accordance with the EPA Exceptional Event Regulation: 210 and 157 ug/m3 on March 22 and April 6, respectively, at Coachella Valley 2 (high wind events); 167 ug/m3 on April 12 at Perris Valley (high wind event); 165 and 155 ug/m3 on July 5 at East San Gabriel 1 and Central San Bernardino Valley 1, respectively (fireworks displays); and high concentration throughout the District on October 21, with a maximum concentration of 559 ug/m3 at Metropolitan Riverside County 1 (high wind and wildfire event).

ppm - Parts Per Million parts of air, by yolur	no		Λ Λ	M - An	nual Arith	metic M	200		Pollutar	nt not monit	orad											

ppm - Parts Per Million parts of air, by volume.

a) - The federal 8-hour standard (8-hour average CO > 9 ppm) and state 8-hour standard (8-hour average CO > 9.0 ppm) were not exceeded. The federal and state 1-hour standards (35 ppm and 20 ppm) were not exceeded, either.

- c) The 8-hour average California ozone standard of 0.070 ppm was established effective May 17, 2006.
- d) The federal standard is annual arithmetic mean NO<sub>2</sub> > 0.0534 ppm. California Air Resources Board has revised the NO<sub>2</sub> 1-hour state standard from 0.25 ppm to 0.18 ppm and has established a new annual standard of 0.030 ppm, effective March 20, 2008.
- e) The state standards are 1-hour average  $SO_2 > 0.25$  ppm and 24-hour average  $SO_2 > 0.04$  ppm. The federal standards are annual arithmetic mean  $SO_2 > 0.03$  ppm, 24-hour average > 0.14 ppm, and 3-hour average > 0.50 ppm. The federal and state  $SO_2$  standards were not exceeded.

The map showing the locations of source/receptor areas can be accessed via the Internet at <a href="http://www.aqmd.gov/telemweb/areamap.aspx">http://www.aqmd.gov/telemweb/areamap.aspx</a>. Locations of source/receptor areas are shown on the "South Coast Air Quality Management District Air Monitoring Areas" map available free of charge from SCAQMD Public Information.

\*\* Salton Sea Air Basin.

<sup>\*</sup> Less than 12 full months of data; may not be representative.

b) - The federal 1-hour ozone standard was revoked and replaced by the 8-hour average ozone standard effective June 15, 2005. U.S. EPA has revised the federal 8-hour ozone standard from 0.084 ppm to 0.075 ppm, effective May 27, 2008.

ug/m <sup>3</sup> - Micrograms per cubic meter of air			Λ	$\Delta M - \Delta nnn$	al A mithana	tio Moon		Dol	lutant not r	nonitomad				_					_	

μg/m<sup>3</sup> - Micrograms per cubic meter of air.

AAM = Annual Arithmetic Mean

-- - Pollutant not monitored.

f) - PM10 samples were collected every 6 days at all sites except for Station Numbers 4144 and 4157 where samples were collected every 3 days.

- h) Total suspended particulates, lead, and sulfate were determined from samples collected every 6 days by the high volume sampler method, on glass fiber filter media.
- i) Federal annual PM10 standard (AAM > 50 μg/m³) was revoked effective December 17, 2006. State standard is annual average (AAM) > 20 μg/m³.
- j) U.S. EPA has revised the federal 24-hour PM2.5 standard from 65 μg/m³ to 35 μg/m³; effective December 17, 2006.
- k) Federal PM2.5 standard is annual average (AAM) > 15 μg/m<sup>3</sup>. State standard is annual average (AAM) > 12 μg/m<sup>3</sup>.
- l) Federal lead standard is quarterly average > 1.5 μg/m<sup>3</sup>, and state standard is monthly average ≥ 1.5 μg/m<sup>3</sup>. U.S. EPA has established the federal standard of 0.15 ug/m<sup>3</sup>, rolling 3-month average, as of October 15, 2008.

\*\* Salton Sea Air Basin.

Printed on Recycled Paper

<sup>\*</sup> Less than 12 full months of data; may not be representative.

g) - PM2.5 samples were collected every 3 days at all sites except for the following sites: Station Numbers 060, 072, 077, 087, 3176, and 4144 where samples were taken every 6 days.

<sup>[1]</sup> Used URBEMIS2007's rate for demolition dust. PM10 pounds/day = (0.00042 pounds/cubic feet) \* (total cubic feet of material in one day).

<sup>[2]</sup> Used UREBEMIS2007's rate for grading dust of 38.2 pounds per acre, and applied 61% reduction based on Rule 403 compliance.

# Appendix E

Health Risk Assessment Dispersion Modeling

### **HEALTH RISK ASSESSMENT**

**Project Alternative** 

PROJECT: Echo Park Lake PROJECT NO: 2009-034

**Annual Average Receptor Concentration** 

Pollutant	micrograms/cubic meter
Diesel Particular Matter (DPM)	0.85218

#### **EXCESS CANCER RISK CALCULATION**

**Lifetime Exposure Adjustment (LEA)** 

Receptor:	Sensitive Receptors
hours per day	10
days per week	5
weeks per year	48
years	2.17
LEA	0.008503401

Unit Risk Factor (URF) for DPM	0.0003

#### **FINDINGS**

Receptor:	Sensitive Receptors		
Excess Cancer Risk			
Excess Cancer Risk (Per 1	2.1739		
Million Persons)	2.1739		
SCAQMD Threshold	>= 10 in 1 million		
Exceed Threshold?	No		

#### Formulas:

Cancer Risk = DPM Conc x DPM URF x LEA

DPM = Diesel Particulate Matter

URF = Unit Risk Factor

LEA = Lifetime Exposure Adjustment

   DFAULT ELEV
  *** MODEL SETUP OPTIONS SUMMARY ***
 **Model Is Setup For Calculation of Average CONCentration Values.
        -- DEPOSITION LOGIC
 -- DEPOSITION LOGIC --
**Model Uses NO DRY DEPLETION. DDPLETE = F
**Model Uses NO WET DEPLETION. WDPLETE = F
**NO GAS DRY DEPOSITION Data Provided.
 **Model Uses URBAN Dispersion Algorithm for the SBL for 57 Source(s), for Total of 1 Urban Area(s):

Urban Population = 9862049.0; Urban Roughness Length = 1.000 m
 **Model Uses Regulatory DEFAULT Options:

1. Stack-tip Downwash.

2. Model Accounts for ELEVated Terrain Effects.

3. Use Calms Processing Routine.

4. Use Missing Data Processing Routine.

5. No Exponential Decay for URBAN/Non-SO2
 **Model Assumes No FLAGPOLE Receptor Heights.
 **Model Calculates ANNUAL Averages Only
  **This Run Includes: 57 Source(s);
                                                                                                  4 Source Group(s); and 1548 Receptor(s)
  **The Model Assumes A Pollutant Type of: DPM
  **Model Set To Continue RUNning After the Setup Testing.
  **Output Options Selected:

Model Outputs Tables of ANNUAL Averages by Receptor

Model Outputs External File(s) of High Values for Plotting (PLOTFILE Keyword)
 **NOTE: The Following Flags May Appear Following CONC Values: c for Calm Hours
                                                                                                                                               m for Missing Hours
b for Both Calm and Missing Hours
 **Misc. Inputs: Base Elev. for Pot. Temp. Profile (m MSL) = 87.00; Decay Coef. = 0.000; Rot. Emission Units = GRAMS/SEC; Emission Rate Unit Factor = Output Units = MICROGRAMS/M**3
                                                                                                                                                                                                                                         ; Rot. Angle
  **Approximate Storage Requirements of Model = 1.4 MB of RAM.
   **MODELOPTs:
                                                                                                                                                                                                                                                                                    PAGE
